Subject: Nemasket - Nitsch Engineering Comments Dated July 3, 2018
Attachments: 2018-07-03 Nemasket Street Fields.pdf; Attachment B Combined Drawings 7-12-18.pdf

Hi Sarah:

To close the loop on Scott Turner's comments dated July 3, 2018 (attached here for convenience), all of the changes have been incorporated into the plans, revised copies of which are attached. Please see below:

Comment 1 – The SWPPP is in preparation and will be submitted before construction.

Comment 2 – The requested revisions are on Drawing 3

Comment 3 – The requested revisions are on Drawing 2

Comment 4 – TRC has confirmed that the depths and elevations in the Synthetic Turf Typical Section are consistent with the stone in the modeled hydrologic calculations.

We are grateful for the Conservation Commission's careful consideration of our application and the constructive commentary offered by your consultant (Nitsch Engineering). Please let us know if you or the Commissioners need anything else.

Best,

-Dave

David M. Sullivan, LSP

Senior Consultant and ECR Practice Safety Director

At TRC, safety isn't accidental, it's intentional!
