## Rainfall:

Precipitation Frequencies \& rainfall accumulations generated from the following NOAA Atlas 14, Volume 10, Version 2
New Bedford Municipal Airport
Station ID 19-5251
Duration $\quad 2 \mathrm{yr}$ : 3.37 (2.85-3.98)
$24 \mathrm{hr} \quad 10 \mathrm{yr}: 5.01(4.19-5.95)$
(inches) $\quad 100 \mathrm{yr}: 7.60(5.87-9.79)$

## Impervious Area

H.M.A. Pad - Driveway
( $78^{\prime} \times 116^{\prime}$ ) - ( $\left.30^{\prime} \times 8^{\prime}\right)$
$=8,808 \mathrm{sqft}$

## Rainfall Volume Calcs.

$$
\begin{gathered}
2 \mathrm{yr}=(3.98 \mathrm{in})^{*}(.083)^{*}(8,808 \mathrm{sqft})=2,921.32 \mathrm{ft}^{3} \\
* 10 \mathrm{yr}=(5.95 \mathrm{in}))^{*}(.083)^{*}(8,808 \mathrm{sqft})=4,367.30 \mathrm{ft}^{3} \\
100 \mathrm{yr}=(9.79 \mathrm{in})^{*}(.083)^{*}(8,808 \mathrm{sqft})=7,185.86 \mathrm{ft}^{3}
\end{gathered}
$$

*Volume held for minimum design capacity of swale surrounding shed structure.

## Volume to Recharge

Soil Texture: Sand, Loamy Sand, or sandy loam
Hydrologic Soil Group: A
Volume to Recharge: 0.60 inches of runoff
Volume to be recharged: $0.60^{\prime \prime} \times 4,367.3 \mathrm{ft}^{3}=2,620.38 \mathrm{ft}^{3}$
$\Delta=1,746.92 \mathrm{ft}^{3}$ (to be retained in swale)
Swale Capacity Volume
Area ${ }_{\text {top }}=3460.59 \mathrm{ft}^{3}$
Area воттом $=2,138.16 \mathrm{ft}^{3}$
$\Delta=1,322.43 \mathrm{ft}^{3}$
$1 / 2 \Delta=661.22 \mathrm{ft}^{3}$
TOTAL $=2,138.16+661.22=\underline{\mathbf{2 , 7 9 9} .38 \mathbf{f t}^{3}}$
*2,799.38 $\div 1746.92=1.60 x$ the required volume
