Re: Walsh Field – Summary of Analytical Results

Dear Mr. Alfonse:

The purpose of this letter is to present a summary of analytical results from soil sampling event that occurred on February 23, 2006. Also included with this letter is a soil boring log of all soil boring subsurface information, analytical summary tables, and a plan showing analytical exceedances at each associated soil boring location. The February 2006 subsurface investigations were performed as an initial sampling event to determine the horizontal and vertical extent of fill materials as well as the nature of contamination, if present.

Subsurface investigations have been performed at Walsh Field (formerly Sargent Field) (located located southeast of the former McCoy Field and south of the New Bedford High School). Soil/fill samples were collected and submitted for laboratory analysis of:

- Polychlorinated biphenyls (PCBs);
- RCRA 8 Metals;
- Polynuclear aromatic hydrocarbons (PAHs); and
- Receiving facility parameters (volatile organic compounds (VOCs), pesticides, herbicides, flashpoint, reactivity, and total petroleum hydrocarbons (TPH)).

As you know, we obtained samples on a frequency that would enable us to reasonably characterize the site, while simultaneously compiling appropriate analytical data for off-site management of contaminated soil/ash, if necessary. Supplemental sampling and analyses will be required prior to any response actions involving off-site management of contaminated soil/ash.

Soil Boring/Sampling Summary

During the February 23, 2006, a total of 80 soil borings were advanced via Geoprobe. An additional 12 surface samples (0-6 inches) were collected by BETA personnel. Fill was encountered at 74 locations. Of the 74 locations with observed fill, 22 locations had fill at depths \geq 2.5 feet below grade. Soil samples were collected at soil boring locations where fill was observed at depths less than 2.5 feet below grade. Refer to the attached soil boring log for a summary of subsurface materials encountered. Cross-sections have been prepared and included for the northeastern and northern portions of the property.

Summary of Analytical Results

PCB Results

A total of 69 grab samples, including five (5) quality assessment/quality control (QA/QC) samples, were submitted for PCB analyses. The following PCB concentrations apply:

- Minimum.....Non-detect (below method detection levels);
- Maximum.....0.66 milligrams per kilogram (parts per million); and
- Average.....0.18 parts per million (ppm).
-

No samples exceeded 2 ppm (Massachusetts Contingency Plan (MCP) Method 1 S-1 Soil Standard).

RCRA 8 Metals Results

A total of 52 grab samples, including three (3) QA/QC samples, were submitted for RCRA 8 Metals analyses. If any analytical result exceeded the Toxicity Characteristic (20 Times) Rule, it was subjected to a Toxicity Characteristic Leaching Procedure (per receiving facility requirements).

Arsenic

The minimum, maximum, and average arsenic concentrations are non-detect, 55.60 ppm, and 12.85 ppm, respectively. Nine (9) samples exceeded the S-1 Soil Standard (20 ppm).

Barium

The minimum, maximum, and average barium concentrations are non-detect, 1,060 ppm, and 244.7 ppm, respectively. One (1) sample exceeded the S-1 Soil Standard (1,000 ppm).

Cadmium

The minimum, maximum, and average cadmium concentrations are non-detect, 61.0 ppm, and 6.35 ppm, respectively. Six (6) samples exceeded the S-1 Soil Standard (2 ppm).

Chromium

The minimum, maximum, and average chromium concentrations are 4.17 ppm, 156 ppm, and 21.19 ppm, respectively. Eight (8) samples exceeded the S-1 Soil Standard (30 ppm).

Lead

The minimum, maximum, and average lead concentrations are 24 ppm, 4,590 ppm, and 644.13 ppm, respectively. A total of 28 samples exceeded the S-1 Soil Standard (300 ppm) of which 18 samples exceeded the “background level” of 600 ppm. One (1) sample exceeded the UCL (3,000 ppm), and two (2) samples exceeded the applicable TCLP limit.

Mercury

The minimum, maximum, and average mercury concentrations are non-detect, 6.93 ppm, and 0.77 ppm, respectively. No samples exceeded the S-1 Soil Standard.

Selenium

The minimum, maximum, and average selenium concentrations are non-detect, 15.4 ppm, and 5.35 ppm, respectively. No samples exceeded the S-1 Soil Standard.

Silver

The minimum and maximum, and average silver concentrations are non-detect and 7.40 ppm (one sample), respectively. No samples exceeded the S-1 Soil Standard.

Polynuclear Aromatic Hydrocarbons (PAHs)

A total of 50 samples were submitted for PAH analyses. Thirty six (36) samples exceeded S-1 Soil Standards for various compounds. Of the 36 samples, fourteen (14) exceeded allowable “background levels.”

Other Receiving Facility Requirements

Soil samples are either non-detect or well below receiving facility requirements for analytical parameters such as VOCS, pesticides, herbicides, flashpoint, and reactivity. Two samples exceeded the S-1 Soil Standard for the diesel range organics (DRO) component of TPH.

Contaminants of Concern (COCs)

For the purpose of this analytical data review, a COC is a compound with a concentration that exceeds either the applicable MCP Method 1 Soil Standard or an applicable “background level” as outlined in “Background Levels of Polycyclic Aromatic Hydrocarbons and Metals in Soil, MADEP, May 2002.” Upon review of the soil analytical data, the following COCs have been identified:

- PCBs;

Mr. Scott Alfonse
June 9, 2006
Page 4

- Arsenic;
- Barium;
- Cadmium;
- Lead; and
- PAHs (specifically pyrene, benzo(a)anthracene, chrysene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, ideno(1,2,3-cd)pyrene, and dibenzo(a,h)anthracene).

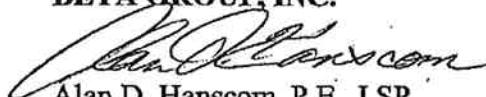

MCP Response Actions

It is apparent that the level of contamination detected at Walsh Field is much lower than detected at the High School. At this time, it is not anticipated that significant response actions will be required; however, we are currently performing a quantitative Method 1 risk characterization to help determine if a condition of significant risk to human health exists (as defined under the MCP).

Within the next week or so, we will be able to provide some indication as to the extent of response actions required at Walsh Field. Please call me at (781) 255-1982 with any questions in the meantime.

Very truly yours,

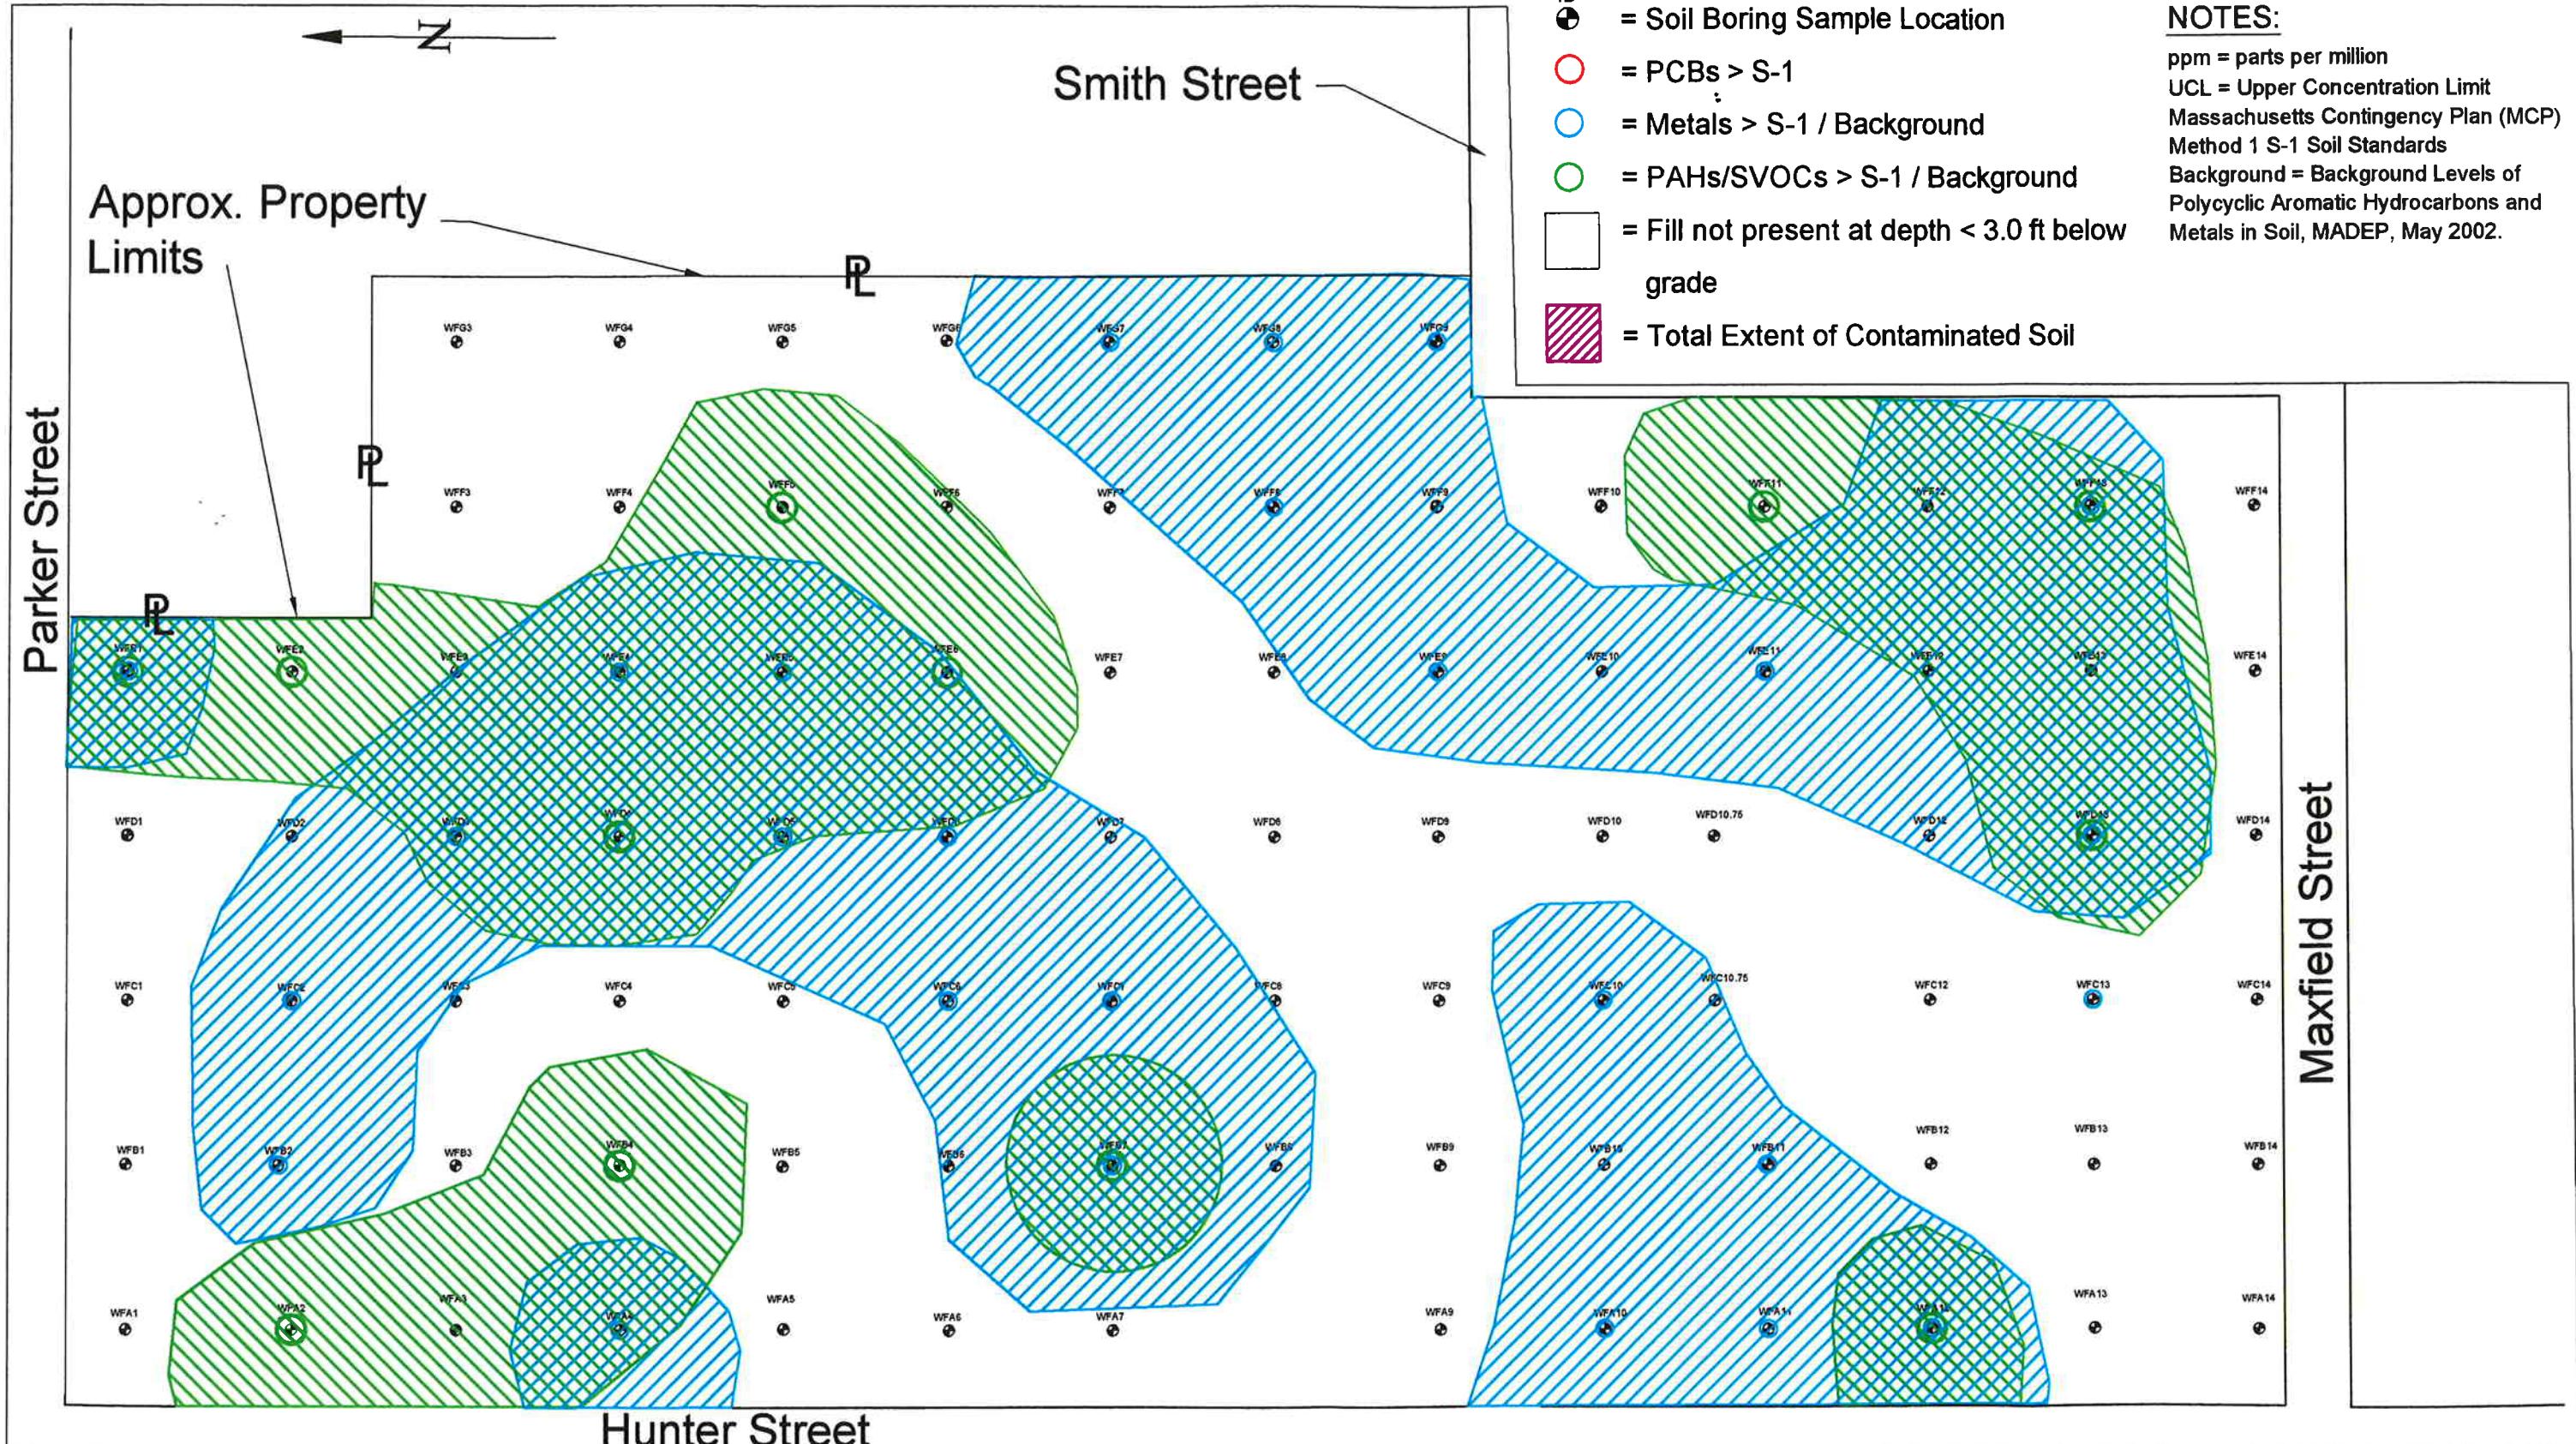

BETA GROUP, INC.

NOTES:

S-1 = Massachusetts Contingency Plan (MCP) Method 1 Soil Standard for category S-1 soil (with GW-2/GW-3 Groundwater Standards).

TCLP = Toxicity Characteristic Leaching Potential

¹ = Background Levels of Polycyclic Aromatic Hydrocarbons and Metals in Soil, MADEP, May 2002² = In the absence of fill-specific data the "natural" soil value has been adopted (refer to ¹)

~ = No standard or analysis not performed

(mg/kg) = milligrams per kilogram (parts per million (ppm))

(mg/L) = milligrams per liter

ND = Not detected above method detection limit

value Bold font indicates concentration exceeding MCP S-1 Soil Standard

value Dark gray shading with bold font indicates concentration exceeding both S-1 soil standards and Background Levels ¹

value Black shading with bold white font indicates concentration exceeds UCL or TCLP Regulatory Limit

LABORATORY ANALYTICAL RESULTS

REPORT OF ANALYTICAL RESULTS

NETLAB Case Number R0224-05

Prepared for:

Attn: Al Hanscom
BETA Group, Inc.
315 Norwood Park South
Norwood, MA 02062

Report Date: March 21, 2006

Lab # RI010

NEW ENGLAND TESTING LABORATORY, INC.

1254 Douglas Avenue, North Providence, Rhode Island 02904-5392
PROVIDENCE (401) 353-3420 TOLL FREE: 1-888-863-8522

ANALYTICAL METHOD REPORT CERTIFICATION FORM

Laboratory Name: New England Testing Laboratory, Inc. Project #: 2685

Project Location: Walsh Field RTN¹:

This form provides certifications for the following data set: R0224-05

Sample Matrices: Groundwater () Soil/Sediment (X) Drinking Water () Other:

SW-846 Methods Used	8260B (X)	8151A (X)	8330 ()	6010B ()	7470A/1A ()
	8270C (X)	8081A (X)	VPH ()	6020 ()	9014M ² ()
	8082 (X)	8021B ()	EPH ()	7000 S ³ ()	Other: (X)

1. List Release Tracking Number (RTN), if known
 2. M – SW-846 Method 9014 or MADEP Physiologically Available Cyanide (PAC) Method
 3. S – SW-846 Methods 7000 Series List individual method and analyte

An affirmative response to questions A, B, and C is required for "Presumptive Certainty" status

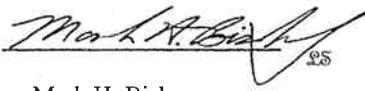

A	Were all samples received by the laboratory in a condition consistent with that described on the Chain-of Custody documentation for the data set?	Yes (X) No ¹ ()
B	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guidelines?	Yes (X) No ¹ ()
C	Does the analytical data included in this report meet all the requirements for "Presumptive Certainty", as described in Section 2.0 of the MADEP document CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ¹ () Not Applicable ()
D	VPH and EPH Methods only: Was the VPH and EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)	Yes () No ¹ ()

A response to questions E and F below is required for "Presumptive Certainty" status

E	Were all QC performance standards and recommendations for the specified methods achieved?	Yes () No ¹ (X)
F	Were results for all analyte-list compounds/elements for the specified method(s) reported?	Yes () No ¹ (X)

¹All NO answers must be addressed in an attached Environmental Laboratory case narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

**STATEMENTS/CERTIFICATIONS REQUIRED BY THE NATIONAL
ENVIRONMENTAL LABORATORY APPROVAL CONFERENCE (NELAC)**

New England Testing Laboratory is certified under the National Environmental Laboratory Approval Program (NELAP). This certification requires the following statements and certifications be included in our report.

This report shall not be reproduced, except in full, without written approval of the laboratory.

New England Testing certifies that the test results contained within this report meet all NELAC requirements except as detailed in the Case Narrative section of this report.

New England Testing Laboratory, Inc.

SAMPLES SUBMITTED and REQUEST FOR ANALYSIS:

The samples listed in Table I were submitted to New England Testing Laboratory on February 24, 2006. The group of samples appearing in this report was assigned an internal identification number (case number) for laboratory information management purposes. The client's designations for the individual samples, along with our case numbers, are used to identify the samples in this report. The case number for this sample submission is R0224-05.

Custody records are included in this report.

Site: Walsh Field

These methods are documented in:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, USEPA/OSW.

New England Testing Laboratory, Inc.

CASE NARRATIVE:

Sample Receipt:

A sample for ms/msd analysis was supplied for PCBs only. Samples for duplicate analyses were supplied for PCBs and metals only. No field blank was supplied. (This does not qualify the analytical results but does prevent conducting these SW-846 {Chapter 1, Section 3.4} QA Audits.)

The samples were all appropriately cooled and preserved upon receipt.

The samples were received in the appropriate containers.

The chain of custody was adequately completed and corresponded to the samples submitted.

Metals:

All analyses were performed according to NETLAB's documented Standard Operating Procedures, within all required holding times, and with appropriate quality control measures. All QC was within laboratory established acceptance criteria. The samples were received, processed, and reported with no anomalies.

A marginal concentration of lead was detected in the soil method blank. The concentration of lead was at the reporting limit. This has no significance on the usefulness of the sample result, which was found to be considerably greater than the blank contamination.

Semivolatile Organics:

An abbreviated 8270C compound list (PAHs) was reported per client request.

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

Sample "88" was analyzed for method 8270C at an initial 10X dilution; the high viscosity of the extract prevented analysis at the normal final volume of 1mL.

PCBs:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

Volatile Organics:

All samples were analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria, with the following exception:

The surrogate compound 1,2-Dichloroethene-d4 had a marginally high recovery in sample "86". The recovery was 133% with QC limits of 76-130%.

Pesticides:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

Herbicides:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration and method blank were within method specified quality control criteria. All surrogates were within quality control limits.

The laboratory control sample (LCS) was out of control limits. Because of this excursion, the samples, a method blank and LCS were re-extracted and reanalyzed to confirm initial results. This was performed beyond the method specified hold time. The results for the associated calibration, method blank, and LCS were within method specified quality control criteria. No detectable herbicides were found in either set of results.

DRO:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

GRO:

All samples were analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria, with the following exception:

General Chemistry: No anomalies or excursions from QC limits.

Flashpoint: No anomalies or excursions from QC limits.

Reactive Cyanide: No anomalies or excursions from QC limits.

Reactive Sulfide: No anomalies or excursions from QC limits.

RESULTS: VOLATILE ORGANIC COMPOUNDS

The presence of the NETLAB LOGO in the top right corner of each page in this section indicates:

The Technical Manager of the Organics Analysis Department certifies that the samples included in this section have been prepared and analyzed using the procedures cited and that the results have been reviewed and approved. Any exceptions or qualifications of substance have been reported in the case narrative.

RESULTS: SEMIVOLATILE ORGANIC COMPOUNDS

The presence of the NETLAB LOGO in the top right corner of each page in this section indicates:

The Technical Manager of the Organics Analysis Department certifies that the samples included in this section have been prepared and analyzed using the procedures cited and that the results have been reviewed and approved. Any exceptions or qualifications of substance have been reported in the case narrative.

PROVIDENCE (401) 353-3420 TOLL FREE: 1-888-863-8522

ANALYTICAL METHOD REPORT CERTIFICATION FORM

Laboratory Name: New England Testing Laboratory, Inc. Project #: 2685

Project Location: Walsh Field RTN¹:

This form provides certifications for the following data set: R0224-06

Sample Matrices: Groundwater () Soil/Sediment (X) Drinking Water () Other:

SW-846 Methods Used	8260B (X)	8151A (X)	8330 ()	6010B ()	7470A/1A ()
	8270C (X)	8081A (X)	VPH ()	6020 ()	9014M ² ()
	8082 (X)	8021B ()	EPH ()	7000 S ³ ()	Other: (X)

1- List Release Tracking Number (RTN), if known.

2-M - SW-846 Method 9014 or MADEP Physiologically Available Cyanide (PAC) Method

3-S - SW-846 Methods 7000 Series - List individual method and analyte

An affirmative response to questions A, B, and C is required for "Presumptive Certainty" status

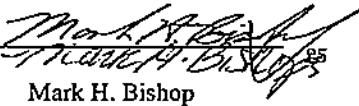

A	Were all samples received by the laboratory in a condition consistent with that described on the Chain-of Custody documentation for the data set?	Yes (X) No ¹ ()
B	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guidelines?	Yes (X) No ¹ ()
C	Does the analytical data included in this report meet all the requirements for "Presumptive Certainty", as described in Section 2.0 of the MADEP document CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	Yes (X) No ¹ () Not Applicable ()
D	VPH and EPH Methods only: Was the VPH and EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)	Yes () No ¹ ()

A response to questions E and F below is required for "Presumptive Certainty" status

E	Were all QC performance standards and recommendations for the specified methods achieved?	Yes () No ¹ (X)
F	Were results for all analyte-list compounds/elements for the specified method(s) reported?	Yes () No ¹ (X)

¹All NO answers must be addressed in an attached Environmental Laboratory case narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

**STATEMENTS/CERTIFICATIONS REQUIRED BY THE NATIONAL
ENVIRONMENTAL LABORATORY APPROVAL CONFERENCE (NELAC)**

New England Testing Laboratory is certified under the National Environmental Laboratory Approval Program (NELAP). This certification requires the following statements and certifications be included in our report.

This report shall not be reproduced, except in full, without written approval of the laboratory.

New England Testing certifies that the test results contained within this report meet all NELAC requirements except as detailed in the Case Narrative section of this report.

SAMPLES SUBMITTED and REQUEST FOR ANALYSIS:

The samples listed in Table I were submitted to New England Testing Laboratory on February 24, 2006. The group of samples appearing in this report was assigned an internal identification number (case number) for laboratory information management purposes. The client's designations for the individual samples, along with our case numbers, are used to identify the samples in this report. The case number for this sample submission is R0224-06.

Custody records are included in this report.

Site: Walsh Field

These methods are documented in:

Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW-846, USEPA/OSW.

New England Testing Laboratory, Inc.

CASE NARRATIVE:

Sample Receipt:

Samples for duplicate analyses were supplied for PCBs and metals only. A sample for ms/msd analysis was supplied for PCBs only and will be reported under separate cover (R0224-05). No field blank was supplied. (This does not qualify the analytical results but does prevent conducting these SW-846 {Chapter I, Section 3.4} QA Audits.)

The samples were all appropriately cooled and preserved upon receipt.

The samples were received in the appropriate containers.

The chain of custody was adequately completed and corresponded to the samples submitted.

Metals:

All analyses were performed according to NETLAB's documented Standard Operating Procedures, within all required holding times, and with appropriate quality control measures. All QC was within laboratory established acceptance criteria. The samples were received, processed, and reported with no anomalies.

A marginal concentration of lead was detected in the soil method blank. The concentration of lead was at the reporting limit. This has no significance on the usefulness of the sample result, which was found to be considerably greater than the blank contamination.

Semivolatile Organics:

An abbreviated 8270C compound list (PAHs) was reported per client request.

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

Samples "100" and "108" were analyzed for method 8270C at an initial 10X dilution. The high viscosity of the sample extracts prevented analysis at the normal final volume of 1mL.

Samples "110" and "118" were analyzed for method 8270C at an initial 1X dilution. The high levels of contamination prevented resolution of the internal standards from the high background of the sample, and therefore the samples could not be reported from the undiluted analyses. Sample "110" was reanalyzed and reported at a 10X dilution. Sample "118" was reanalyzed and reported at a 100X dilution.

PCBs:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

Volatile Organics:

The sample "Trip Blank" was analyzed and reported as a soil sample, with nominal weight of 10.000g and zero moisture content.

All samples were analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria, with the following exception:

The surrogate compound 1,2-Dichloroethene-d4 had a marginally high recovery in sample "126". The recovery was 131% with QC limits of 76-130%.

Pesticides:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

The contaminated profile of sample "118" prevented the calculation of the associated surrogate. This profile masked the surrogate and as a result, the recovery was reported as "obscured".

There were no other anomalies or non-conformances encountered

Herbicides:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration and method blank were within method specified quality control criteria. All surrogates were within quality control limits.

The laboratory control sample (LCS) was out of control limits. Because of this excursion, the samples, a method blank and LCS were re-extracted and reanalyzed to confirm initial results. This was performed beyond the method specified hold time. The results for the associated calibration, method blank, and LCS were within method specified quality control criteria. No detectable herbicides were found in either set of results.

DRO:

All samples were extracted and analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria.

The samples "108" and "118" exceeded the calibration range of the instrument and were analyzed at a dilution. As a result, the surrogates were diluted out.

There were no other anomalies or non-conformances encountered.

GRO:

All samples were analyzed within method specified holding times and according to NETLAB's documented standard operating procedures. The results for the associated calibration, method blank and laboratory control sample (LCS) were within method specified quality control criteria, with the following exception:

General Chemistry:

Flashpoint: No anomalies or excursions from QC limits.

Reactive Cyanide: No anomalies or excursions from QC limits.

Reactive Sulfide: No anomalies or excursions from QC limits.

Subject: 2685 Walsh Field

Workorder No.: 0602174

Dear Alan Hanscom:

AMRO Environmental Laboratories Corp. received 37 samples on 2/23/2006 for the analyses presented in the following report.

AMRO operates a Quality Assurance Program which meets or exceeds National Environmental Laboratory Accreditation Conference (NELAC), state, and EPA requirements.

The enclosed Sample Receipt Checklist details the condition of your sample(s) upon receipt. Please be advised that any unused sample volume and sample extracts will be stored for a period of 60 days from sample receipt date (90 days for samples from New York). After this time, AMRO will properly dispose of the remaining sample(s). If you require further analysis, or need the samples held for a longer period, please contact us immediately.

This report consists of a total of 110 pages. This letter is an integral part of your data report. All results in this project relate only to the sample(s) as received by the laboratory and documented in the Chain-of-Custody. This report shall not be reproduced except in full, without the written approval of the laboratory. If you have any questions regarding this project in the future, please refer to the Workorder Number above.

Sincerely,

Nancy Stewart
Vice President

State Certifications: NH (NELAC): 1001, MA: M-NH012, CT: PH-0758, NY: I1278 (NELAC), ME: NH012 and 1001, NJ: NH125, RI: 00105, U.S. Army Corps of Engineers (USACE), Naval Facilities Engineering Service Center (NFESC).

Hard copy of the State Certification is available upon request.

CASE NARRATIVE**8270-SEMOVATILES-SOIL:**

1. A Laboratory Control Sample (LCS) and Laboratory Sample Duplicate (LCSD) were performed on Batch ID: 15306:

1.1 The % Recovery for 1 analyte out of 17 analytes in both the LCS and LCSD were outside the laboratory control limits.

2. Only PAH analytes were reported per client request.

8082 PCB-SOIL:

1. The results for samples: 111A:WFG-9-0-6"(0602174-15A), 125A:WFB-10-0-6"(0602174-21A), 129A:WFD-10-0-6"(0602174-24A), 135A:WFF-11-0-6"(0602174-27A) are estimated concentrations due to the presence of multiple overlapping Aroclors.

METALS:

1. Only 8 RCRA metals are reported per the client request.

An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status								
A Were all samples received by the laboratory in a condition consistent with that described on the Chain of Custody documentation for the data set?						<input checked="" type="radio"/> Yes <input type="radio"/> No ¹		
B Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guide lines?						<input checked="" type="radio"/> Yes <input type="radio"/> No ¹		
C Does the analytical data included in this report meet all the requirements for Presumptive Certainty, as described in Section 2.0 of the MADEP document CAM VII A, Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?						<input checked="" type="radio"/> Yes <input type="radio"/> No ¹		
D VPH and EPH methods only: Was the VPH or EPH method run without significant modifications, as specified in Section 11.3?						<input checked="" type="radio"/> Yes <input type="radio"/> No ¹ <i>N/A</i>		
A response to questions E and F below is required for "Presumptive Certainty" status								
E Were all QC performance standards and recommendations for the specified methods achieved?						<input checked="" type="radio"/> Yes <input type="radio"/> No ¹		
F Were results for all analyte-list compounds / elements for the specified method(s) reported?						Yes <input type="radio"/> No ¹		
¹ All NO answers must be addressed in an attached Environmental Laboratory case narrative.								
I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

DATA COMMENT PAGE

Organic Data Qualifiers

- ND Indicates compound was analyzed for, but not detected at or above the reporting limit.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than the method detection limit.
- H Method prescribed holding time exceeded.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- B This flag is used when the analyte is found in the associated blank as well as in the sample.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- # See Case Narrative

Micro Data Qualifiers

- TNTC Too numerous to count

Inorganic Data Qualifiers

- ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.
- J Indicates a value greater than or equal to the method detection limit, but less than the quantitation limit.
- H Indicates analytical holding time exceedance.
- B Indicates that the analyte is found in the associated blank, as well as in the sample.
- MSA Indicates value determined by the Method of Standard Addition
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- W Post-digestion spike for Furnace AA analysis is out of control limits (85-115), while sample absorbance is less than 50% of spike absorbance.
- *
- + Duplicate analysis not within control limits.
- Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995
- # See Case Narrative

Report Comments:

1. Soil, sediment and sludge sample results are reported on a "dry weight" basis.
2. Reporting limits are adjusted for sample size used, dilutions and moisture content, if applicable.

Qualifiers: ND - Not Detected at the Reporting Limit

J - Analyte detected below quantitation limits

RL - Reporting Limit; defined as the lowest concentration the laboratory can accurately quantitate.

S - Spike Recovery outside accepted recovery limits

R - RPD outside accepted recovery limits

B - Analyte detected in the associated Method Blank

NA - Not applicable where J values or ND results occur

Subject: 2685 Walsh Field

Workorder No.: 0603056

Dear Alan Hanscom:

AMRO Environmental Laboratories Corp. received 8 samples on 3/7/06 for the analyses presented in the following report.

AMRO operates a Quality Assurance Program which meets or exceeds National Environmental Laboratory Accreditation Conference (NELAC), state, and EPA requirements.

The enclosed Sample Receipt Checklist details the condition of your sample(s) upon receipt. Please be advised that any unused sample volume and sample extracts will be stored for a period of 60 days from sample receipt date (90 days for samples from New York). After this time, AMRO will properly dispose of the remaining sample(s). If you require further analysis, or need the samples held for a longer period, please contact us immediately.

This report consists of a total of 70 pages. This letter is an integral part of your data report. All results in this project relate only to the sample(s) as received by the laboratory and documented in the Chain-of-Custody. This report shall not be reproduced except in full, without the written approval of the laboratory. If you have any questions regarding this project in the future, please refer to the Workorder Number above.

Sincerely,

Nancy Stewart
Vice President

State Certifications: NH (NELAC): 1001, MA: M-NH012, CT: PH-0758, NY: 11278 (NELAC), ME: NH012 and 1001, NJ: NH125, RI: 00105, U.S. Army Corps of Engineers (USACE), Naval Facilities Engineering Service Center (NFESC).

Hard copy of the State Certification is available upon request.

Re: WALSH FIELD 2/23/06 SAMPLES

Urgent

Please Comment

For Review

Please Reply

Comments:

ATTACHED ARE THE COCS FOR WALSH FIELD. PLEASE

Run the INDICATED ANALYSES. I know the SAMPLES

ARE APPROACHING THEIR HOLD TIMES FOR CERTAIN ANALYSES.

PLEASE PRIORITIZE THE EXTRACTIONS ACCORDINGLY. PLEASE

CALL WITH ANY QUESTIONS.

COC Nos: 53069, 53070, 53056, 53057

*Sincerely,
Barbara Laughlin*

BETA is a full-service consulting firm for over 20 years, specializing in civil, transportation / traffic, structural, environmental engineering, as well as environmental sciences and GIS / Information Systems Management.

SAMPLE RECEIPT CHECKLIST

Client: <u>BETA</u>	Project Name: <u>2685 WALSH FIELD</u>	AMRO ID: <u>0602174</u>
Ship via: (circle one) Fed Ex., UPS, AMRO Courier,	Date Rec.: <u>2-23-06</u>	Date Due: <u>3-2-06</u>
Hand Del., Other Courier, Other:		
Items to be Checked Upon Receipt		
1. Army Samples received in individual plastic bags?	Yes	No
2. Custody Seals present?		✓
3. Custody Seals Intact?		✓
4. Air Bill included in folder if received?		✓
5. Is COC included with samples?		✓
6. Is COC signed and dated by client?		✓
7. Laboratory receipt temperature. Samples rec. with ice <input checked="" type="checkbox"/> ice packs <input checked="" type="checkbox"/> neither	TEMP = <u>50</u>	
8. Were samples received the same day they were sampled? Is client temperature $4^{\circ}\text{C} \pm 2^{\circ}\text{C}$? If no obtain authorization from the client for the analyses.	✓	
Client authorization from: _____ Date: _____ Obtained by: _____		
9. Is the COC filled out correctly and completely?	✓	
10. Does the info on the COC match the samples?	✓	
11. Were samples rec. within holding time?	✓	
12. Were all samples properly labeled?	✓	
13. Were all samples properly preserved?	✓	
14. Were proper sample containers used?	✓	
15. Were all samples received intact? (none broken or leaking)	✓	
16. Were VOA vials rec. with no air bubbles?	✓	
17. Were the sample volumes sufficient for requested analysis?	✓	
18. Were all samples received?	✓	
19. VPH and VOA Soils only: Sampling Method VPH (circle one): M=Methanol, E=EnCore (air-tight container) Sampling Method VOA (circle one): M=Methanol, SB=Sodium Bisulfate, E=EnCore, B=Bulk If M or SB: Does preservative cover the soil? If NO then client must be faxed.	ON HOLD	
Does preservation level come close to the fill line on the vial? If NO then client must be faxed.		
Were vials provided by AMRO? If NO then weights MUST be obtained from client		
Was dry weight aliquot provided? If NO then fax client and inform the VOA lab ASAP.		
20. Subcontracted Samples: What samples sent: Where sent: Date: Analysis: TAT:	✓	
21. Information entered into: Internal Tracking Log? Dry Weight Log? Client Log? Composite Log? Filtration Log?	✓	

CLIENT: BETA Group, Inc.

CASE NARRATIVE**8260-VOLATILES:**

1. A Laboratory Control Sample (LCS) and Laboratory Sample Duplicate (LCSD) were performed on 03/09/06 (Batch ID: R32073).

1.1 The % Recovery for 6 analytes out of 71 analytes in the LCS was outside the laboratory control limits.

1.2 The % Recovery for 6 analytes out of 71 analytes in the LCSD was outside the laboratory control limits.

1.3 The %RPD for 1 analyte out of 71 analytes was outside the laboratory control limits.

2. 2-Butanone, Diethyl ether, and Trichlorofluoromethane recovered outside the control limits in the Continuing Calibration Verification Standard analyzed on 03/09/06.

GC/ECD-PESTICIDES:

1. The %difference (%D) in the opening and closing Continuing Calibration Verification Standard (S16 + S17) analyzed on 03/13/06 on instrument Trent exceeded the $\pm 15\%$ limit for some compounds. The laboratory used the average percent difference for all analytes as per SW-846 Method 8081A Section 7.5. All results were reported from the rear column (CLP Pesticide 2; 0.32mm). Please refer to the Continuing Calibration Summary Form in the Pesticide Section.

2. The recovery for the surrogate Decachlorobiphenyl was above the laboratory control limits in samples: 79: WFE-6-1'-2.5' (0603056-01B), 101: WFC-8-1'-2.5' (0603056-02B), 127: WFC-10-2'-2.5' (0603056-05B), 137: WFE-11-2'-2.5' (0603056-06B), and 147: WFA-12-1'-2.5' (0603056-07B) due to sample matrix interference.

3. A Laboratory Control Sample (LCS-15372) and Laboratory Control Duplicate Sample (LCSD-15372) were performed.

3.1 The % Recovery for 5 analytes out of 18 analytes in the LCS was outside the laboratory control limits.

3.2 The % Recovery for 9 analytes out of 18 analytes in the LCSD was outside the laboratory control limits.

DRO-SOIL:

1. The ending Continuing Calibration Verification Standards analyzed on 03/10/06 were outside the laboratory control limits ($\pm 15\%$).

CLIENT: BETA Group, Inc.
Project: 2685 Walsh Field
Lab Order: 0603056

CASE NARRATIVE

WET CHEMISTRY:

1. The holding time for Reactive Sulfide analysis was exceeded , however samples were analyzed per client request.

An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status						
A Were all samples received by the laboratory in a condition consistent with that described on the Chain of Custody documentation for the data set?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹	
B Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guide lines?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹	
C Does the analytical data included in this report meet all the requirements for Presumptive Certainty, as described in Section 2.0 of the MADEP document CAM VII A, Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹	
D VPH and EPH methods only: Was the VPH or EPH method run without significant modifications, as specified in Section 11.3?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹	
A response to questions E and F below is required for "Presumptive Certainty" status						
E Were all QC performance standards and recommendations for the specified methods achieved?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹	
F Were results for all analyte-list compounds / elements for the specified method(s) reported?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹	
¹ All NO answers must be addressed in an attached Environmental Laboratory case narrative.						
I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

DATA COMMENT PAGE

Organic Data Qualifiers

- ND Indicates compound was analyzed for, but not detected at or above the reporting limit.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than the method detection limit.
- H Method prescribed holding time exceeded.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- B This flag is used when the analyte is found in the associated blank as well as in the sample.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- # See Case Narrative

Micro Data Qualifiers

TNTC Too numerous to count

Inorganic Data Qualifiers

- ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.
- J Indicates a value greater than or equal to the method detection limit, but less than the quantitation limit.
- H Indicates analytical holding time exceedance.
- B Indicates that the analyte is found in the associated blank, as well as in the sample.
- MSA Indicates value determined by the Method of Standard Addition
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- W Post-digestion spike for Furnace AA analysis is out of control limits (85-115), while sample absorbance is less than 50% of spike absorbance.
- *
- + Duplicate analysis not within control limits.
- Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995
- # See Case Narrative

Report Comments:

1. Soil, sediment and sludge sample results are reported on a "dry weight" basis.
2. Reporting limits are adjusted for sample size used, dilutions and moisture content, if applicable.

Qualifiers:

S - Spike Recovery outside accepted recovery limits

B - Analyte detected in the associated Method Blank

J - Analyte detected below quantitation limits

R - RPD outside accepted recovery limits

RL - Reporting Limit; defined as the lowest concentration the laboratory can accurately quantitate.

NA - Not applicable where J values or ND results occur

Workorder No.: 0603051

Dear Alan Hanscom:

AMRO Environmental Laboratories Corp. received 33 samples on 3/7/2006 for the analyses presented in the following report.

The enclosed results are additional analyses requested after the original report was issued. AMRO operates a Quality Assurance Program which meets or exceeds National Environmental Laboratory Accreditation Conference (NELAC), state, and EPA requirements.

The enclosed Sample Receipt Checklist details the condition of your sample(s) upon receipt. Please be advised that any unused sample volume and sample extracts will be stored for a period of thirty (30) days from this report date. After this time, AMRO will properly dispose of the remaining sample(s). If you require further analysis, or need the samples held for a longer period, please contact us immediately.

This report consists of a total of 32 pages. This letter is an integral part of your data report. If you have any questions regarding this project in the future, please refer to the Order Number above.

Sincerely,

Nancy Stewart
Vice President

State Certifications: NH (NELAC): 1001, MA: M-NH012, CT: PH-0758, NY: 11278 (NELAC), ME: NH012 and 1001, NJ: NH125, RI: 00105, U.S. Army Corps of Engineers (USACE), Naval Facilities Engineering Service Center (NFESC).

Hard copy of the State Certification is available upon request.

CASE NARRATIVE

METALS

1. Only Cadmium, Chromium, and Lead metals are reported per the client request.

MADEP/MCP Analytical Method Report Certification Form						
Laboratory Name: AMRO Environmental Laboratories, Inc.			Project Number: 0603051			
Project Location: 2685 NB High School		MADEP RTN 1				
0603051-01	0603051-02	0603051-03	0603051-04	0603051-05	0603051-06	0603051-07
0603051-08	0603051-09	0603051-10	0603051-11	0603051-12	0603051-13	0603051-14
0603051-15	0603051-16	0603051-17	0603051-18	0603051-19	0603051-20	0603051-21
0603051-22	0603051-23	0603051-24	0603051-25	0603051-26	0603051-27	0603051-28
0603051-29	0603051-30	0603051-31	0603051-32	0603051-33		
Sample Matrices:		Ground Water <input type="checkbox"/>	Soil / Sediment <input checked="" type="checkbox"/>	Drinking Water <input type="checkbox"/>	Other Matrix <input type="checkbox"/>	
MADEP/MCP SW-846 Methods Used		8260B <input type="checkbox"/>	8151A <input type="checkbox"/>	8330 <input type="checkbox"/>	6010B <input checked="" type="checkbox"/>	7470A/1A <input type="checkbox"/>
As specified in the MADEP Compendium of Analytical Methods		8270C <input type="checkbox"/>	8081A <input type="checkbox"/>	VPH <input type="checkbox"/>	6020 <input type="checkbox"/>	9014M ² <input type="checkbox"/>
Method(s) used		8082 <input type="checkbox"/>	8021B <input type="checkbox"/>	EPH <input type="checkbox"/>	7000S ³ <input type="checkbox"/>	Other <input type="checkbox"/>
1. List Release/Tracking Number (RTN) if known						
2. M = SW-846 Method; 9014 = MADEP Physiologically Available Cyanide (PAC) Method						
3. SW-846 Methods: 7000 Series List individual method/analyte						
An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status						
A	Were all samples received by the laboratory in a condition consistent with that described on the Chain of Custody documentation for the data set?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
B	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guide lines?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
C	Does the analytical data included in this report meet all the requirements for Presumptive Certainty, as described in Section 2.0 of the MADEP document CAM VII A, Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
D	VPH and EPH methods only: Was the VPH or EPH method run without significant modifications, as specified in Section 11.3?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
A response to questions E and F below is required for "Presumptive Certainty" status						
E	Were all QC performance standards and recommendations for the specified methods achieved?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
F	Were results for all analyte-list compounds / elements for the specified method(s) reported?					<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
1 All NO answers must be addressed in an attached Environmental Laboratory case narrative.						
I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.						
Signature: <u>Nancy Stewart</u>		Position: Vice President				
Printed Name: Nancy Stewart		Date: 3-15-06				

DATA COMMENT PAGE

Organic Data Qualifiers

- ND Indicates compound was analyzed for, but not detected at or above the reporting limit.
- J Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the data indicates the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than the method detection limit.
- H Method prescribed holding time exceeded.
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- B This flag is used when the analyte is found in the associated blank as well as in the sample.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- # See Case Narrative

Micro Data Qualifiers

- TNTC Too numerous to count

Inorganic Data Qualifiers

- ND or U Indicates element was analyzed for, but not detected at or above the reporting limit.
- J Indicates a value greater than or equal to the method detection limit, but less than the quantitation limit.
- H Indicates analytical holding time exceedance.
- B Indicates that the analyte is found in the associated blank, as well as in the sample.
- MSA Indicates value determined by the Method of Standard Addition
- E This flag identifies compounds whose concentrations exceed the calibration range of the instrument for that specific analysis.
- R RPD outside accepted recovery limits
- RL Reporting limit; defined as the lowest concentration the laboratory can accurately quantitate.
- S Spike Recovery outside accepted recovery limits.
- W Post-digestion spike for Furnace AA analysis is out of control limits (85-115), while sample absorbance is less than 50% of spike absorbance.
- *
- + Duplicate analysis not within control limits.
- Indicates the correlation coefficient for the Method of Standard Addition is less than 0.995
- # See Case Narrative

Report Comments:

1. Soil, sediment and sludge sample results are reported on a "dry weight" basis.
2. Reporting limits are adjusted for sample size used, dilutions and moisture content, if applicable.

Sample ID: LCS-15364		Batch ID: 15364		Test Code: SW1311/6010 Units: mg/L		Analysis Date: 3/10/2006 9:28:24 PM		Prep Date: 3/9/2006	
Client ID:				Run ID: ICP-OPTIMA_060310B		SeqNo: 530367			
Analyte	QC Sample Result	RL	Units	QC Spike Amount	Original Sample Result	%REC	LowLimit	HighLimit	or MS Result
Cadmium	4.151	0.050	mg/L	4	0	104	80	120	0
Chromium	20.08	0.10	mg/L	20	0	100	80	120	0
Lead	10.49	0.25	mg/L	10	0	105	80	120	0

Qualifiers: ND - Not Detected at the Reporting Limit
J - Analyte detected below quantitation limits
RL - Reporting Limit; defined as the lowest concentration the laboratory can accurately quantitate.

S - Spike Recovery outside accepted recovery limits
R - RPD outside accepted recovery limits
NA - Not applicable where J values or ND results occur

B - Analyte detected in the associated Method Blank
NA - Not applicable where J values or ND results occur

AMRO Environmental Laboratories Corp.

Date: 14-Mar-06
