Release Abatement Measure Completion Report

Greenwood Street and Ruggles Street Buildings Demolition Activity

101, 102 and 111 Greenwood Street, and 98, 108 and 118 Ruggles Street
New Bedford, Massachusetts

Release Tracking Number 4-15685

TRC Project Number: 115058

September 24, 2010

On behalf of the City of New Bedford, Massachusetts (the City), TRC Environmental Corporation (TRC) has prepared this Release Abatement Measure Completion Report (RAM Completion Report) per 310 CMR 40.0446 of the Massachusetts Contingency Plan (MCP). This RAM Completion Report addresses the demolition activities that have been completed by the City at 101, 102 and 111 Greenwood Street, and 98, 108 and 118 Ruggles Street in New Bedford, Massachusetts (the "Site"). The applicable Massachusetts Department of Environmental Protection (MassDEP) Release Tracking Number (RTN) is 4-15685, which is assigned to the Parker Street Waste Site (PSWS). MCP Special Project status (310 CMR 40.0060) has been established for RTN 4-15685 and other RTNs associated with the PSWS.

The purpose of this RAM Completion Report is to describe the activities undertaken by the City during construction activities (demolition of dwellings at six properties) at the 101, 102, and 111 Greenwood Street, and 98, 108 and 118 Ruggles Street (hereinafter "Acquired Residential Properties") portion of the PSWS located on the eastern end of Greenwood and Ruggles Street near or at the intersection of Hathaway Boulevard in New Bedford, Massachusetts. The original RAM Plan was submitted to MassDEP on September 9, 2009. To address changes, a stand-alone replacement to the original plan was submitted to MassDEP on September 17, 2009. TRC submitted a Revised Modified RAM Plan to MassDEP on July 6, 2010, which acted as a stand-alone revision to the September 17, 2009 Modified RAM Plan. The MassDEP issued conditional approval of the Revised Modified RAM Plan on July 13, 2010. The activities described in the Revised Modified RAM Plan serve as an interim step toward the implementation of a full remedy for the subject parcels, which is currently in the planning stage.

Activities completed under the Revised Modified RAM Plan included:

- **Fencing.** Installation of a black, metal, chain link security fence on the perimeter of the parcels (completed in September 2009 as part of site preparation activity), which will remain in place until such time that a complete remedy is implemented;
- **Limited vegetation clearing.** Trees and shrubs were removed only as needed to facilitate Site access and demolition activities. To the degree feasible trees and shrubs were left in place to help maintain the privacy of the abutting properties;

- **Demolition and removal activities.** The following demolition and removal activities took place.
 - Demolition of dwelling structures and off-site disposal of dwelling debris (aside from the concrete foundation materials) at each of the Acquired Residential Properties;
 - Demolition and off-site disposal of concrete foundation and basement slab material from the 102 Greenwood Street property;
 - Break-up and off-site disposal of the concrete foundation, basement slab and foam insulation material from the 118 Ruggles Street parcel;
 - Break-up and off-site removal of concrete foundation wall material from the 101 and 111 Greenwood Street and 98 and 108 Ruggles Street parcels to maintain the pre-existing Site topography following backfilling/grading activities
 - Breaking up of the basement floor slab to facilitate post-demolition drainage at each of the Acquired Residential Properties (except the 102 Greenwood Street and 118 Ruggles Street parcels where both the foundations and basement slabs were sent for off-site disposal);
- **Backfilling.** Backfilling of basement space/covering of basement slab with crushed concrete foundation materials deemed suitable for on-site recycling and with documented contaminant-free fill material analyzed in advance for the presence of regulated contaminants;
- **Removal and disposal of other structures.** Removal of an above-ground swimming pool from the 102 Greenwood Street property and other miscellaneous aboveground structures such as sheds from the 111 Greenwood Street and 118 Ruggles Street properties;
- **Disconnection of utilities.** Excavation and immediate replacement of soil during the disconnection and capping of Site underground utilities; and
- **Site restoration.** Grading of entire Site with documented contaminant-free loam and subsequent hydroseeding.

This RAM Completion Report is organized as follows: Section I (Background) briefly summarizes information on TRC's involvement with the Site and the circumstances associated with the detection of the release condition; Section II (RAM Completion Report) provides the information required for a RAM Completion Report under the MCP, specifically 310 CMR 40.0446; Section III (References) lists information sources relied upon in the preparation of this RAM Completion Report.

Appendices are provided for supporting information including a photograph log of work completed under the RAM Plan (Appendix A), a copy of the MassDEP conditional approval letter (Appendix B), a copy of the United States Environmental Protection Agency (EPA) approval notification (Appendix C), meteorological data and wind rose diagrams (Appendix D), dust monitoring data and field sheets (Appendix E), copies of the Uniform Hazardous Waste Manifests, Non-Hazardous Waste Manifests and Weight Ticket documents (Appendix F), a copy of the July 26, 2010 teleconference memorandum regarding removal of unimpacted concrete foundation wall material from the Site (Appendix G), and laboratory data packages associated with imported backfill and loam material (Appendix H).

I. BACKGROUND

(a) Site Description

The Acquired Residential Properties portion of the Site is located on the eastern end of Greenwood and Ruggles Streets near or at the intersection of Hathaway Boulevard in New Bedford, Massachusetts (Figure 1). The Site is bordered to the north by a vacant lot (also known as the Nemasket Street Lots), to the east by Hathaway Boulevard and a New Bedford High School (NBHS) parking lot, to the south by a church and residential properties, and to the west by residential properties on Greenwood and Ruggles Streets.

Prior to the implementation of the RAM, the Site consisted of unoccupied single family dwellings. The lots are currently vacant as a result of RAM-related demolition of the dwellings. The Site is relatively level with a gentle slope up to the west on some lots. A Site location map is provided as Figure 1.

(b) Acquired Residential Properties Investigation History

In December 2005 through June 2006, The Beta Group, Incorporated (BETA) of Norwood, Massachusetts conducted subsurface soil sampling investigations at the Acquired Residential Properties portion of the Site. Soil samples collected by BETA were analyzed for polychlorinated biphenyls (PCBs), Resource Conservation and Recovery Act (RCRA) 8 metals, polyaromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), and Total Petroleum Hydrocarbons (TPH). Several of the samples indicated individual detections of compounds that exceeded their applicable MCP Method 1 S-1 Soil Standards. A summary of the soil analytical results for detected compounds at each of the Acquired Residential Properties is included in the Revised Modified RAM Plan submitted to the MassDEP on July 6, 2010. A summary of the data collected by BETA from the residential area was submitted in the following BETA reports:

- *Summary of Analytical Data, Volume I of II, Properties Located on: Greenwood Street, Ruggles Street, Durfee Street, New Bedford, Massachusetts, dated March 15, 2006;*
- *Summary of Analytical Data, Volume II of II, Properties Located on: Greenwood Street, Ruggles Street, Durfee Street, New Bedford, Massachusetts, dated March 15, 2006;*
- *Summary of Analytical Data, 98 Ruggles Street, New Bedford, Massachusetts, dated September 14, 2006; and*
- *Summary of Analytical Data, 102 Greenwood Street, New Bedford, Massachusetts, dated September 14, 2006*

TRC conducted additional soil testing in June 2008 at 102 Greenwood Street. TRC's environmental investigation at 102 Greenwood Street consisted of direct push soil borings using a track-mounted drill rig or a dolly-mounted direct push machine to sample soil and to observe subsurface soil conditions. Soil borings performed in the basement and garage areas were executed using a hammer drill. Drilling services and equipment were provided by New England Geotech, LLC (New England Geotech) of Jamestown, Rhode Island. TRC utilized the services of New England Geotech to perform drilling activities at the Site under TRC field supervision. The borings were advanced

using Geoprobe® direct push methods. The samples were visually examined in the field for evidence of impacts and field screened using the MassDEP jar headspace methodology and a photoionization detector (PID). Samples were collected from each boring at various depths to delineate the extent of soil impacts. The investigative approach was intended to evaluate the presence or absence of fill, the vertical extent of fill, and the potential presence of impacts to soil and fill material.

Borings conducted in the exterior of the 102 Greenwood Street Property were advanced and samples were collected until native overburden was encountered unless refusal was encountered first. Where native material was submitted for laboratory analysis, two samples of native material were typically collected in borings selected to characterize the native horizon. The lower native sample was retained for analysis contingent upon the results of the upper native horizon analysis in an attempt to delineate the vertical extent of soil impacts, if present. The contingent native material was not analyzed if the native material interval above it was found to be below cleanup criteria based on laboratory analysis or as directed by the TRC Licensed Site Professional (LSP).

Sub-slab borings conducted on 102 Greenwood Street by TRC relied on smaller tools and equipment and were conducted to evaluate the potential presence of sub-slab conditions. Soil samples collected were analyzed for PCBs, MCP metals, and PAHs. Several of the samples indicated individual detections of compounds that exceeded their applicable MCP Method 1 S-1 Soil Standards. A summary of the 102 Greenwood Street soil data was submitted in TRC's *Data Summary Report, 102 Greenwood Street, New Bedford, Massachusetts* dated July 2008.

A detailed description of soil analytical results for each of the Acquired Residential Properties is included in the Revised Modified RAM Plan submitted to MassDEP on July 6, 2010.

(c) Description of Concrete Foundation & Foam Insulation Sampling

TRC conducted sampling of concrete from the sub-grade foundations of the six Acquired Residential Properties (and exterior foundation foam insulation at one residence) between March 8, 2010 and April 1, 2010 pursuant to the City's September 16, 2009 notification letter to the EPA and the City's formal addendum to the notification letter submitted to the EPA on February 17, 2010. No demolition or soil excavation activities were implemented under this scope of work.

The collection of samples from the two properties with deeper foundations/basements (111 Greenwood Street and 118 Ruggles Street) proceeded by horizontally coring the foundation concrete from inside the basement of the residence. The concrete foundations at each of the properties were sampled at regular intervals (at a rate of approximately one sample per ten linear feet of interior basement foundation wall) around the entire perimeter of each dwelling concrete coring machine (e.g., Hilti™ drill equipped with 2- or 3-inch diameter diamond bit) was used to horizontally core the foundation from the interior basement wall to the exterior foundation face. The outer 0.5 inches of the concrete core (i.e., exterior foundation surface in contact with soil, including any waterproof coating) was removed for PCB Aroclor analysis (SW-846 Method 8082) by Northeast Analytical Incorporated (NEA) of Schenectady, New York.

Following removal of the concrete core, a hammer drill was used to horizontally advance a 2-inch diameter large bore sampling device for the collection of discrete soil samples. The approximately 2 to 3 inches of soil material formerly in contact with the exterior foundation surface was collected and held by NEA for PCB Aroclor analysis (SW-846 Method 8082) contingent upon the analytical results of the adjacent concrete sample. Analysis of soil samples was only authorized if total concentrations of PCB Aroclors detected in the concrete sample exceeded 1 milligram per kilogram (mg/kg) total PCBs. The soil material was geologically logged by qualified TRC field personnel familiar with the Site.

The concrete foundations at each of the four subject properties with shallow foundation systems (101 Greenwood Street, 102 Greenwood Street, 98 Ruggles Street and 108 Ruggles Street) were also sampled at regular intervals. One sample was collected per ten linear feet of exterior foundation wall around the entire perimeter of each dwelling, including permanently attached structures with footings likely to extend below ground surface (e.g., stairs, masonry porches, decks, etc.). In addition, the foundation of the detached concrete shed located in the rear of the 111 Greenwood Street Property was sampled. Samples of soil material immediately adjacent to each concrete sample location were concurrently collected and held for potential analysis.

Sampling was focused on those portions of the foundation that were in direct contact with subsurface soil. At each pre-marked sample location, the existing soil material was temporarily pulled back to expose the surface of the foundation to a depth of approximately two feet below ground surface. A decontaminated shovel was used to pull the soil material away from the foundation wall only to the degree necessary to allow for concrete sample collection. The foundation wall was inspected for the presence or absence of any exterior foam insulation. If present (like that found at the 118 Ruggles Street residence), the foam insulation material was sampled for PCB Aroclor analysis (SW-846 Method 8082) by NEA. No foam insulation was found at properties other than 118 Ruggles Street.

Samples of the soil material pulled back from the foundation were collected from 0 to 1 foot and 1 to 2 feet below ground surface to be held by NEA for PCB Aroclor analysis (SW-846 Method 8082) contingent upon the analytical results of the adjacent concrete samples. Analysis of soil samples was only authorized if total concentrations of PCB Aroclors detected in the concrete sample exceeded 1 mg/kg total PCBs. The soil material was geologically logged by qualified TRC field personnel familiar with the Site.

Following soil sampling (and sub-grade foam insulation sampling at 118 Ruggles Street), the exposed concrete foundation surface was dry brushed to remove any remaining soil material. The concrete foundation was sampled from 0 to 0.5-inches below the concrete surface, regardless of the presence of a weatherproofing coating (or foam insulation in the case of 118 Ruggles Street), using a hammer drill or equivalent in accordance with the EPA SOP for Sampling Porous Surface for PCBs (Revision 3, July 22, 2008). Samples were collected from 0 to 1 foot and 1 to 2 feet below ground surface along the foundation wall. Each concrete sample was submitted to NEA for PCB Aroclor analysis (SW-846 Method 8082).

Two of the thirty-nine concrete samples collected from the 102 Greenwood Street property exhibited concentrations of PCBs in excess of 50 mg/kg. In addition, four of the fourteen foam

insulation samples collected from the 118 Ruggles Street property exhibited concentrations of PCBs in excess of 1 mg/kg. Consistent with EPA approval, the concrete foundation and basement slab material from 102 Greenwood Street and foam insulation, concrete foundation, and basement slab material from 118 Ruggles Street were managed for off-site disposal as PCB Remediation Waste. None of the concrete foundation samples collected from 118 Ruggles Street or any of the other four Acquired Residential Properties exhibited concentrations of PCBs in excess of 1 mg/kg; however, since the foam insulation was not readily able to be separated from the foundation at 118 Ruggles Street, all foundation and basement slab material was managed as PCB Remediation Waste. A summary of the concrete foundation and foam insulation analytical data was submitted in TRC's *Residential Foundation Sampling Results Memorandum* to the EPA dated May 18, 2010. The results of the concrete and foam insulation investigation were also described in the Revised Modified RAM Plan submitted to MassDEP on July 6, 2010.

II. RAM COMPLETION REPORT (310 CMR 40.0446)

This RAM Completion Report is organized according to the minimum information needs set forth under 310 CMR 40.0446(4)(a) through (f) of the MCP.

(a) Description of Release, Threat of Release, Site Conditions, and Surrounding Receptors

1. Release Description

As described previously, MassDEP tracks the Site under RTN 4-15685 that is associated with historical fill related to the PSWS. PCBs, PAHs, TPH and several metals were detected in soil samples collected from the Acquired Residential Properties.

2. Site Conditions

The Acquired Residential Properties portion of the Site is located on the eastern end of Greenwood and Ruggles Streets near or at the intersection of Hathaway Boulevard in New Bedford, Massachusetts (Figure 1). The Site is bordered to the north by a vacant lot (also known as the Nemasket Street Lots), to the east by Hathaway Boulevard and a NBHS parking lot, to the south by a church and residential properties, and to the west by residential properties located along Greenwood and Ruggles Streets.

The Site consisted of unoccupied former single family dwellings; however, the lots are currently vacant as a result of demolition of the dwellings. The Site is relatively level with a gentle slope up to the west on some lots.

3. Surrounding Receptor

The Site lies within 500 feet of NBHS, residential dwellings, a church, the Keith Middle School (KMS), the Varsity Baseball Diamond portion of Dr. Paul F. Walsh Memorial Field (Walsh Field), and the construction site for athletic fields at the location of the former Keith Junior High School (KJHS)/New Andrea McCoy Field.

Groundwater categories at the Site include actual or potential GW-2, depending upon proximity to occupied structures, and GW-3, which applies to all groundwater throughout the Commonwealth. Groundwater is encountered at approximately 6 to 8 feet below ground surface based on recent groundwater monitoring well gauging at the adjacent NBHS campus by TRC and deeper in other PSWS locations. However, groundwater impacts from chemical compounds associated with the Site are not expected based on the types of impacts detected in the soil of the Acquired Residential Properties (low solubility, strong tendency for adsorption) and the laboratory results of groundwater samples taken from groundwater monitoring wells located at the NBHS portion of the site in August and September 2008, April 2009, January, February and April 2010, and routine groundwater monitoring at the KMS.

Based on review of on-line MassDEP Priority Resource Map data available from Massachusetts Geographic Information System (MassGIS), the Site is not located within a Current or Potential Drinking Water Source Area (MassGIS, 2008).

The Site is not located in a wetland resource area. No other documented sensitive ecological receptor areas (e.g., Areas of Critical Environmental Concern [ACECs]) are known to be located at or near the site. No municipal or residential wells are known to be in the area.

(b) Description of the RAM completed at the Site

All activities included in the July 6, 2010 Revised Modified RAM Plan have been completed. Completed activities include the following:

- Installation of a black, metal, chain link security fence on the perimeter of the parcels (completed in September 2009 as part of site preparation activity), which will remain in place until such time that a complete remedy is implemented;
- Removal of trees and shrubs only as needed to facilitate Site access (to the degree feasible trees and shrubs were left in place to help maintain the privacy of the abutting properties);
- Demolition of dwelling structures and off-site disposal of dwelling debris (aside from the concrete foundation materials) at each of the Acquired Residential Properties;
- Crushing and off-site disposal of concrete foundation and basement slab material from the 102 Greenwood Street property;
- Crushing and off-site disposal of the concrete foundation, basement slab and foam insulation material from the 118 Ruggles Street parcel;
- Crushing and off-site removal of concrete foundation wall material from the 101 and 111 Greenwood Street and 98 and 108 Ruggles Street parcels to maintain the pre-existing Site topography following backfilling/grading activities;
- Breaking up the basement floor slab to facilitate post-demolition drainage at each of the Acquired Residential Properties (except the 102 Greenwood Street and 118 Ruggles Street parcels where the entire concrete foundations were sent for off-site disposal);
- Backfilling of basement space/covering of basement slab with crushed concrete foundation materials deemed suitable for on-site recycling and with documented contaminant-free fill material analyzed in advance for the presence of regulated contaminants;
- Removal of an above-ground swimming pool from the 102 Greenwood Street property and other miscellaneous aboveground structures such as sheds from the 111 Greenwood Street and 118 Ruggles Street properties;
- Excavation and immediate replacement of soil during the disconnection and capping of Site underground utilities; and
- Grading of entire Site with documented contaminant free loam and subsequent hydroseeding.

As described in the following sections, RAM-related activities were implemented between September 8, 2009 and August 3, 2010. A photograph log of RAM-related activities is included as

Appendix A. With the exception of the MassDEP approved installation of a perimeter security fence, access gates and limited Site preparation activities (e.g., placement of hay bales and silt fence for erosion control), the RAM-related activities were completed between July 15, 2010 and August 3, 2010 following a public comment period on the Revised Modified RAM Plan. On July 13, 2010 the MassDEP issued conditional approval to conduct the RAM and the EPA issued an approval for removal and disposal of PCB-impacted building foundations. Copies of the MassDEP conditional approval letter and the EPA approval notification are included as Appendix B and Appendix C, respectively.

In September 2009 the City's Department of Public Infrastructure (DPI) installed a black, chain-link security fence around the six Acquired Residential Properties. The 102 Greenwood Street parcel was fenced in and connected to existing fence on the south and west sides of the property. The remaining properties located between Greenwood and Ruggles Streets were fenced in as one area. The fence extends along the southern edge parallel to Greenwood Street, along the eastern edge by Hathaway Boulevard and along the northern edge parallel with Ruggles Street. Fence posts were installed using a hydraulic driving machine and driven directly into the ground. No soil was disturbed during the installation of the fence posts. The chain link fence was hung and gates were installed with access at the eastern end of Greenwood Street. Hay bale and silt fence, as a means of erosion control, were installed around the inside perimeter of the fence to prevent disturbed sediment and demolition debris from leaving the site via overland flow. Filter fabric was also installed in nearby storm drains to prevent sedimentation and clogging of drains.

Prior to demolition of the dwelling structures the City performed abatement work to remove hazardous materials identified within the structures including asbestos containing materials (ACM), miscellaneous containers of fluids, mercury thermostats and other household items or items associated with the materials of construction. TRC performed pre-demolition inspections of the properties and identified various quantities of building-related hazardous materials such as ACM. The City retained Franklin Analytical Services, Inc., of Marion, Massachusetts and Triumvirate Environmental Incorporated (TEI) of Somerville, Massachusetts to perform the pre-demolition abatement of building related hazardous materials in June 2009 and June 2010, respectively.

Private overhead and underground utilities including cable, electric and natural gas were disconnected from each of the Acquired Residential Properties prior to demolition activities. This included the cutting and capping of natural gas services within Greenwood Street under a Utility-Related Abatement Measure (URAM) filed separately by NSTAR for that purpose. The disconnection of City-owned sewer and water lines are described below.

Prior to initiation of demolition activities the City's pest control contractor performed an additional round of extermination. Pest extermination was initiated in September 2009; however, due to the time that elapsed since the 2009 extermination and the initiation of demolition activities in 2010, an additional round was required.

On July 12, 2010, TRC installed a Met One Instruments, Incorporated (Met One) weather station within the central portion of the Site between Ruggles and Greenwood Streets to monitor meteorological conditions throughout the duration of the project. The weather station was relocated throughout the Site as needed to minimize any interference with the use of equipment during

demolition activities. The weather station consisted of a 466A AutoMet™ Data Logger equipped with temperature, relative humidity, wind direction and wind speed AutoMet™ sensors. Meteorological data was recorded as 15-minute averages, 24-hours a day throughout the duration of RAM-related activities. Data collection was initiated on July 12, 2010, prior to implementation of demolition activities, to record several days of background weather conditions. The data was downloaded by TRC field personnel on a regular basis and an hourly summary of the data, including wind rose diagrams, is included as Appendix D.

Demolition activities at the Acquired Residential Properties occurred between July 15, 2010 and August 3, 2010. As detailed below, TRC provided field oversight throughout implementation of the RAM Plan. This included real-time monitoring of meteorological conditions, dust monitoring and work area breathing zone VOC monitoring. Dust monitoring data and field forms are provided as Appendix E. A summary of the daily dust monitoring results is presented in Table 1.

On July 15 and 16, 2010, the City's DPI began preparing the Site for demolition activities. Fencing (chain line and vinyl) throughout the interior of the Acquired Residential Properties was removed and fence posts were cut flush at ground level. Six wooden fence supports (i.e., interior wooden support housed by the vinyl fence post) at the 101 Greenwood Street parcel were pulled from the ground by the DPI due to a lack of sufficient tools to cut through the supports. Supplemental equipment was acquired by the DPI and all additional fence post and supports were cut flush to the ground surface consistent with the Revised Modified RAM Plan. The six removed fence posts were managed as PCB Remediation Waste and transported off-site for disposal in association with material removed from the 102 Greenwood Street property as detailed below. Brush and shrubs were cut using chainsaws and removed from the properties by the DPI for disposal as solid waste. Select trees were cut and removed from the Site, only as necessary to facilitate Site access. Steel road plates were laid along the eastern side of the 102 Greenwood Street parcel as well as between the 101 and 111 Greenwood Street and 98 and 108 Ruggles Street properties to provide Site access while minimizing the disturbance of soils. A Deere™ 270D excavator equipped with a grappler attachment was mobilized to the Site and placed on the steel plates at the 102 Greenwood Street parcel in preparation for demolition activities.

Demolition of the Site structures began at the 102 Greenwood Street property on July 19, 2010. The structure was crushed in towards the center of the foundation footprint progressively from east to west using the grappler. To the degree feasible, pieces of metal were separated out during the demolition process for recycling. Water sprays were generously applied throughout the demolition process for dust suppression purposes. To the degree feasible, the excavator remained on steel plating and/or the concrete basement slab throughout demolition activities. The grappler was used to load structural debris directly into roll-off containers staged on steel plating and/or the asphalt driveway within the 102 Greenwood Street property. Smaller debris was loaded using a skid-steer Bobcat® 773. Once filled, the roll-off containers were drained of excess water (associated with the dust suppression activities) and transported off-site to ABC Disposal Services, Incorporated (ABC) of New Bedford, Massachusetts for disposal. Roll-off containers were continually filled, hauled and replaced throughout the day. Due to limited size of the work zone at the 102 Greenwood Street parcel and to limit health and safety concerns during delivery of roll-off containers, full containers were temporarily placed on a secure, closed portion of Greenwood Street while empty containers were being placed within the Site. Demolition of the 102 Greenwood Street structure was completed

on July 20, 2010. Following demolition of the 102 Greenwood Street structure, all equipment (i.e., excavator tracks, grapppler attachment, bobcat tracks and bucket, hand tools and steel plates) that came into direct contact with concrete or soil was decontaminated prior to being removed from the 102 Greenwood Street property.

Moveable equipment and tools were decontaminated prior to moving between the Acquired Residential Properties as described in the Revised Modified RAM Plan and pursuant to the EPA Approval Notification dated July 13, 2010 (Appendix C). All non-porous moveable equipment and tools were decontaminated using a prescriptive approach per 40 CFR Part 761.70(c)(2)(i) to avoid delays due to laboratory turn-around for verification wipe sampling. Moveable equipment and tools were decontaminated by swabbing the surface with applicable solvent (i.e., Zep Commercial™ Heavy-Duty Citrus Degreaser) meeting the requirements of 40 CFR 761.79(d). The solvent was to dampen rags and/or a broom head for swabbing purposes. This method was applied to all moveable equipment and tools (i.e., excavator tracks, grapppler attachment, bobcat tracks and bucket, hand tools and steel plates) prior to movement between each of the properties throughout implementation of the RAM Plan. The dampened rags, broom head and other personal protective equipment (PPE) used during implementation of decontamination procedures were collected, drummed and removed from the Site for disposal following completion of the RAM-related activities in accordance with 40 CFR 791.61(a)(5)(v). TEI removed one drum of non-liquid cleaning materials and PPE from the Site on August 5, 2010 for off-site disposal. The associated shipping manifest is included in Appendix F.

At the 102 Greenwood Street property, following demolition and removal of the structure, demolition of the concrete foundation walls and basement slab was initiated on July 20, 2010. A Deere™ 410J Backhoe equipped with a Hoe Ram was delivered to the Site by the DPI to break up the concrete as necessary to facilitate off-site transportation and disposal. As a precaution, exposed soil underneath the broken-up concrete was covered with polyethylene sheeting during periods of prolonged inactivity (i.e., overnight between July 20 and July 21, 2010). During concrete demolition on July 20, 2010, a hydraulic line on the Hoe Ram ruptured twice. Less than 2 gallons of hydraulic oil leaked onto the 102 Greenwood Street concrete basement slab. The hydraulic oil was contained and absorbed with materials from an on-site spill kit. Spent spill kit materials (absorbent wipes, booms and pillows) were containerized in a Department of Transportation (DOT) 55-gallon drum. The drum was removed from the Site by TEI on August 5, 2010. A copy of the associated manifest is included as Appendix F.

Consistent with EPA approval, the concrete from the 102 Greenwood Street residence was managed as PCB Remediation Waste. The concrete foundation and basement slab material was broken into pieces less than 12-inches in diameter as required by the receiving facility and loaded directly into lined roll-off containers. TEI inspected the pieces to confirm their size and any material greater than the 12-inch minus size requirement was further broken down prior to shipment. The lined roll-offs were covered and transported off-site via railcar or truck for disposal at the EQ-Wayne Disposal, Incorporated chemical waste landfill facility in Bellville, Michigan on July 21 and 22, 2010. A small amount of concrete could not be fit into the final roll-off container and therefore was drummed and shipped separately from the Site on July 27, 2010. A copy of the associated manifest is included as Appendix F. In addition to the concrete foundation and basement slab material, the swimming pool in the rear of the 102 Greenwood Street property was disassembled by hand and

directly loaded into a lined roll off for off-site disposal as PCB Remediation Waste at the EQ-Wayne facility. The pool support posts were cut at the ground surface, the pool walls were cut into one foot squares, and the pool liner was cut into several pieces to meet the 12-inch minus disposal requirement. TEI maintained Uniform Hazardous Waste Manifests associated with shipping of all PCB Remediation Waste from the 102 Greenwood Street parcel. A total of approximately 120 tons of material were transported off-site as PCB Remediation Waste. Copies of the manifests and weight tickets are included as Appendix F.

As noted above, prior to removal from the 102 Greenwood Street property all equipment was appropriately decontaminated. Demolition of 118 Ruggles Street structure began on July 20, 2010 and was completed on July 22, 2010, including the removal of the shed in the rear of the property. Demolition of 118 Ruggles Street structure was implemented in the same fashion as at the 102 Greenwood Street property. The structure was crushed toward the center of the concrete basement slab using the grappler, loaded directly into roll-off containers, and transported off-site for disposal by ABC. Roll-off containers in this portion of the Site were placed on the steel plates. Full containers were temporarily staged on Ruggles Street during delivery of empty roll-off containers during the remainder of the project. Smaller debris was once again loaded using a skid-steer Bobcat[®] 773. Once filled, the roll-off containers were drained of excess water (associated with the dust suppression activities) and transported off-site.

Due to concentrations of PCBs in excess of 1 mg/kg detected in samples of exterior foam insulation at the 118 Ruggles Street property, the foam insulation was targeted for disposal as PCB Remediation Waste less than 50 mg/kg following EPA approval. On July 21, 2010, the DPI began breaking the concrete foundation at the 118 Ruggles Street property to determine if the foam insulation could feasibly be separated from the concrete. Due to the physical adhesion of the foam insulation to the concrete foundation wall, it was determined that the foam insulation could not be readily separated and therefore the concrete foundation also required off-site disposal. During the demolition large pieces of foam insulation that became separated from the concrete foundation were removed by hand to avoid pulverizing the material into small pieces. These pieces were stockpiled on polyethylene sheeting (6 mil minimum) and subsequently loaded into the lined roll-off containers by hand. The remaining concrete (broken to 12-inches in diameter or less) and foam insulation were loaded directly in lined roll-off containers using the excavator bucket and/or grappler and Bobcat[®] 773.

On July 22 and 23, 2010, the lined and covered roll-off containers containing concrete and foam insulation material from the 118 Ruggles Street property were transported off-site for disposal at the Turnkey Landfill facility in Rochester, New Hampshire. The Turnkey Landfill facility is a Subtitle D landfill permitted to accept PCB Remediation Waste less than 50 mg/kg. TEI maintained Non-Hazardous Waste Manifests associated with shipping of all PCB Remediation Waste from the 118 Ruggles Street parcel. A total of approximately 122 tons of material were transported off-site as PCB Remediation Waste. Copies of the manifests and weight tickets are included as Appendix F. It should be noted that as a precaution, soil exposed during removal of the concrete foundation at 118 Ruggles Street was covered with polyethylene sheeting (6 mil minimum) and secured until backfilling activities were initiated.

Following demolition of the 118 Ruggles Street structure, the DPI demolished the remaining structures at 98 and 108 Ruggles Street and 101 and 111 Greenwood Street, including additional miscellaneous structures such as sheds. The demolition of the Acquired Residential Property structures was completed by July 24, 2010. Each of the aforementioned properties was demolished in a manner consistent with that implemented at the 102 Greenwood Street and 118 Ruggles Street properties. The structures were crushed in towards the center of the foundation footprint using the grappler. To the degree feasible, pieces of metal were separated out during the demolition process for recycling. Water sprays were generously applied throughout the demolition process for dust suppression purposes. The excavator remained on steel plating and/or the concrete basement slab throughout demolition activities. The grappler was used to load structural debris directly into roll-off containers staged on steel plating and/or the asphalt driveways at each property. Smaller debris was loaded using a skid-steer Bobcat® 773. Once filled, the roll-off containers were drained of excess water (associated with the dust suppression activities) and transported off-site to ABC for disposal. As previously noted, all equipment that came into direct contact with concrete or soil was decontaminated prior to being removed from the property.

The Revised Modified RAM Plan described demolition of the concrete foundations and basement slabs at the 98 and 108 Ruggles Street and 101 and 111 Greenwood Street properties to a location at or below grade pursuant to the MassDEP Site Assignment Regulations for Solid Waste Facilities (310 CMR 16.00), specifically the asphalt pavement, brick and concrete recycling operations detailed in 310 CMR 16.05(3)(e). The City filed an On-Site Rubble Crushing Notification Form with the MassDEP and the City of New Bedford Health Department on May 24, 2010. Crushing of the concrete foundations and basement slabs at the four above referenced properties began on July 24, 2010. Following initiation of the concrete crushing activities, the DPI determined that due to the construction of several of the structures (i.e., slab on grade without a basement), covering the crushed concrete on-site would result in significant mounding and modifications to the existing grade. As a result, the DPI requested that the concrete foundation walls at each of the above reference properties be crushed and disposed of off-site at an appropriately permitted facility. As this would require a deviation from the approved Revised Modified RAM Plan, the approval of the EPA and MassDEP was sought via a teleconference call on July 26, 2010. As summarized in TRC's July 26, 2010 Teleconference Memorandum both EPA and MassDEP verbally approved the modification. A copy of the memorandum is included as Appendix G.

Following EPA and MassDEP approval, the DPI loaded and transported crushed concrete foundation wall material from the 98 and 108 Ruggles Street and 101 and 111 Greenwood Street properties off-site for disposal. The concrete basement slabs were crushed in place to a 6-inch diameter or smaller pursuant to MassDEP policy. On July 26 and 27, 2010, the DPI transported approximately 266 tons of unimpacted concrete material to the Crapo Hill Landfill in Dartmouth, Massachusetts. A copy of the acceptance letter from Crapo Hill to the City of New Bedford and weight tickets associated with material shipments are included in Appendix F.

In addition to the above noted leaks at during the 102 Greenwood Street demolition on July 20, 2010, the Hoe Ram hydraulic lines ruptured on several occasion during additional concrete demolition activities. Small leaks occurred on July 22, 26, and 27, 2010. In each case less than approximately 1 to 3 gallons of hydraulic oil leaked onto concrete basement slab or polyethylene covered surfaces. The hydraulic oil was contained and absorbed with materials from an on-site spill

kit. Spent spill kit materials (absorbent wipes, booms and pillows) were containerized in a DOT 55-gallon drum. The drum was removed from the Site by TEI on August 5, 2010. A copy of the associated manifest is included as Appendix F

Following demolition activities at each of the Acquired Residential Properties, remaining municipal underground utilities were disconnected as described in the Revised Modified RAM Plan. Sewer and water supplies were cut and capped or shut off at the gate valve. Limited, temporary soil excavation to facilitate capping of the sewer lines occurred between July 23 and July 30, 2010. Excavated material was temporarily placed on polyethylene sheeting (6 mil minimum) adjacent to each excavation. Following capping of the utility, the excavation was immediately backfilled with the previously excavated soil. TRC personnel observed the excavated soil material for visual and olfactory evidence of contamination and excavated soils were screened for VOCs via the MassDEP jar headspace method. No levels of VOCs above background were detected.

On July 26, 2010 backfilling and grading of the Site began. Documented contaminant-free backfill and loam were imported to the Site. Imported backfill was delivered to the Site via paved driveways and/or steel plating. Backfill material was spread in 1-foot to 2-foot lifts and mechanically compacted. A Wacker RT drum pad foot roller was used to compact the material. Imported backfill was used to cover the demolition footprint and blend into the existing surrounding grade. Additional disturbed areas were graded with approximately 3- to 4-inches of loam. Laboratory analytical data packages associated with the imported backfill and loam material are included as Appendix H. Following grading activities, the Acquired Residential Properties were reseeded. Hydroseeding of all disturbed areas was initiated on August 2 and 3, 2010.

Following completion of RAM-related demolition activities, steel plates were decontaminated in accordance with 40 CFR Part 761.70(c)(2)(i) as described above and removed from the Site between July 27 and August 2, 2010. The silt fence and hay bales have remained in place. The City's Department of Public Facilities (DPF) will maintain the grass during the growing season and the perimeter fence will remain in place until such time that a complete remedy is implemented.

(c) Investigatory and Monitoring Activities

Investigatory activities were not performed as part of the RAM, but rather in advanced of RAM activities as described herein. However, monitoring activities were conducted during the execution of the RAM, as described below and elsewhere herein.

Active dust suppression was employed during all structure demolition, concrete foundation and basement slab crushing and soil excavation and management activities using fire hoses. A condition of no visible dust was maintained throughout implementation of the RAM Plan. Potential fugitive dust clouds were captured with heavy mist water spray. Fugitive dust levels were simultaneously monitored using TSI Dustrak™ air particulate monitors as described in the Revised Modified RAM Plan. The TSI Dustrak™ units were equipped with size-selective inlets for particles of 10 micrometers in diameter or less (PM₁₀). This instrumentation has an accuracy of 0.001 mg/m³ (1 ug/m³). Background samples will be collected for at least 15 minutes at each location prior to the start of daily activities. The dust monitoring instruments were placed in weatherproof cases with an omni-directional probe to minimize wind interference. The dust monitoring instruments were

zeroed daily before use and at the end of the day. Data will be logged at 60-second intervals and data was downloaded and reviewed daily. The TSI Dustrak™ units were periodically checked by field personnel during RAM-related activities.

No sustained (a sustained reading would consist of a reading lasting 15 minutes or longer) ambient dust levels exceeding the EPA 24 hour National Ambient Air Quality Standard (NAAQS) of 0.150 mg/m³ at a downwind sample location were detected during implementation of the RAM Plan. One manually recorded concentration of 0.336 mg/m³ was recorded at a nearest property monitoring location on July 15, 2010. However, this measurement was an instantaneous (1 second) recording and was not sustained. A summary of all Dustrak™ data can be found in Table 1. Dustrak™ data files and field forms are included as Appendix E.

As described in the Revised Modified RAM Plan, the prevailing wind direction was determined daily by on-site TRC personnel based on the available national weather service data (e.g., current National Oceanic and Atmospheric Administration conditions for New Bedford, Massachusetts) and recorded on daily fugitive dust monitoring field forms (see Appendix E). The localized site wind direction was monitored at each dust monitoring location by equipping each station with a free hanging flag/ribbon subject to the influence of the wind. On-site field personnel regularly checked the wind direction and the positioning of fugitive dust monitors was adjusted, based on changes in the localized wind direction, throughout RAM-related activities.

Meteorological conditions were monitored and recorded using a Met One portable weather station. The weather station consisted of a 466A AutoMet™ Data Logger equipped with temperature, relative humidity, wind direction and wind speed AutoMet™ sensors. Meteorological data was recorded as 15-minute averages, 24-hours a day throughout the duration of RAM-related activities. The data was used to confirm wind direction and assist in the configuration of Dustrak™ units across the Site. The data was downloaded by TRC field personnel on a regular basis and an hourly summary of the data, including wind rose diagrams, is included as Appendix D.

Ambient air was also continuously monitored for the presence of VOCs from the breathing zone in the work zone using a PID. No sustained PID readings above the 5 part per million by volume (ppmv) action level were observed. No PID readings exceeded 0.4 ppmv during the course of the project. TRC personnel also collected several MassDEP jar headspace readings from excavated or disturbed soils. Samples were capped and allowed to sit for 10 minutes in order for adequate headspace to develop. Subsequent readings detected no concentrations of VOCs above background.

(d) Findings and Conclusion

The purpose of the Revised Modified RAM Plan was to outline the approach for construction activities (demolition of dwellings at six properties) undertaken by the City at the 101, 102, and 111 Greenwood Street and 98, 108, and 118 Ruggles Street portion of the PSWS. The Revised Modified RAM Plan did not involve the removal of soil from the Acquired Residential Properties, but outlined construction and environmental monitoring activities associated with the demolition of the six dwelling structures. Activities carried out under the Revised Modified RAM Plan represent an interim step towards the implementation of a full remedy for the subject parcels, currently in the planning stages.

The residences were demolished. All waste materials generated were disposed of at appropriate facilities (as documented herein). The work set forth in the Revised Modified RAM Plan is complete.

(e) Management of Remediation Waste, Remedial Waste Water, and/or Remedial Additives

Structural demolition debris (non-concrete) was loaded directly into roll-off containers for off-site disposal by ABC as solid waste. To the degree feasible, metal debris was segregated during the structural demolition for off-site recycling. ABC also employed a separation process to remove recyclable metals from the waste stream.

Consistent with EPA approval, due to concentrations of PCBs in excess of 50 mg/kg in the foundation concrete at the 102 Greenwood Street property, the concrete was managed as PCB Remediation Waste. The concrete foundation and basement slab material was broken into pieces less than 12-inches in diameter as required by the receiving facility and loaded directly into lined roll-off containers. The lined roll-offs were covered and transported off-site via railcar or truck for disposal at the EQ-Wayne Disposal, Incorporated chemical waste landfill facility in Bellville, Michigan. Copies of the manifests and weight tickets are included as Appendix F.

Due to concentrations of PCBs in excess of 1 mg/kg detected in samples of exterior foam insulation at the 118 Ruggles Street property, the foam insulation was targeted for disposal as PCB Remediation Waste less than 50 mg/kg following EPA approval. Due to the physical adhesion of the foam insulation to the concrete foundation wall, it was determined that the foam insulation could not be readily separated and therefore the concrete foundation also required off-site disposal. On July 22 and 23, 2010, the lined and covered roll-off containers containing concrete and foam insulation material from the 118 Ruggles Street property were transported off-site for disposal at the Turnkey Landfill facility in Rochester, New Hampshire. Copies of the manifests and weight tickets are included as Appendix F.

A copy of this report and all associated documents, including waste manifests, will be stored by City for a period of three years in accordance with the 40 CFR 761 record keeping requirements under Subparts J and K.

Following EPA and MassDEP approval, the DPI loaded and transported crushed concrete foundation wall material from the 98 and 108 Ruggles Street and 101 and 111 Greenwood Street properties off-site for disposal. The concrete basement slabs were crushed in place to a 6-inch diameter or smaller pursuant to MassDEP policy. On July 26 and 27, 2010, DPI transported approximately 266 tons of unimpacted concrete material to the Crapo Hill Landfill in Dartmouth, Massachusetts. A copy of the acceptance letter from Crapo Hill to the City of New Bedford and weight tickets associated with material shipments are included in Appendix F.

Moveable equipment and tools were decontaminated prior to moving between the Acquired Residential Properties. All non-porous moveable equipment and tools were decontaminated using a prescriptive approach per 40 CFR Part 761.70(c)(2)(i) to avoid delays due to laboratory turn-around

for verification wipe sampling. The dampened rags, dampened broom, and other personal protective equipment (PPE) used during implementation of decontamination procedures were collected, drummed and removed from the Site for disposal following completion of the RAM-related activities in accordance with 40 CFR 791.61(a)(5)(v). TEI removed one drum of non-liquid cleaning materials and PPE from the Site on August 5, 2010 for off-site disposal. The associated shipping manifest is included in Appendix F.

On several occasions throughout implementation of the RAM Plan, hydraulic lines on DPI equipment ruptured. In each case, the hydraulic oil was contained and absorbed with materials from an on-site spill kit. Spent spill kit materials (absorbent wipes, booms and pillows) were containerized in a DOT 55-gallon drum. The drum was removed from the Site by TEI on August 5, 2010. A copy of the associated manifest is included as Appendix F

No additional remediation waste, remedial wastewater or remedial additives were managed under this RAM Plan.

(b) Ongoing Activities

Ongoing activities include cutting of the grass at the six Acquired Residential Properties up to twice a month during the growing season by the City's DPF. No further ongoing activities are planned under the current Revised Modified RAM Plan. Activities carried out under the Revised Modified RAM Plan represent an interim step towards the implementation of a full remedy for the subject parcels, currently in the planning stages. Hay bales and silt fence will remain until comprehensive remedial actions are undertaken at the site.

1. LSP Opinion

The objective of this RAM Completion Report is to apprise MassDEP of the completion of the City's demolition activities at the Acquired Properties located at the eastern end of Ruggles and Greenwood Streets associated with the PSWS.

This RAM Completion Report has been prepared in accordance with 310 CMR 40.0446 as set forth in the MCP.

RE: **NEW BEDFORD**
Release Tracking Number: **4-0015685**
Revised Modified Release Abatement Measure Plan,
Greenwood Street and Ruggles Street Buildings
Demolition Activity
**CONDITIONAL APPROVAL TO CONDUCT A
RELEASE ABATEMENT MEASURE**

Dear Mr. Alfonse:

The Massachusetts Department of Environmental Protection (MassDEP) has reviewed a document related to the Parker Street Waste Site (the Site) entitled “**Revised Modified Release Abatement Measure Plan, Greenwood Street and Ruggles Street Buildings Demolition Activity**” (the RAM Plan), dated July 6, 2010. The RAM Plan was submitted to MassDEP as required by M.G.L. c. 21E and 310 CMR 40.0000, the Massachusetts Contingency Plan (the MCP). The RAM Plan was prepared on behalf of the City of New Bedford (the City) by TRC Environmental Corporation (TRC) and details activities related to site preparation and demolition activities of six buildings on City-acquired property located at 101, 102 and 111 Greenwood Street and at 98, 108 and 118 Ruggles Street (Acquired Residential Properties) in New Bedford, Massachusetts. The RAM Plan is the final regulatory submittal required to MassDEP to obtain approval to conduct the RAM activities. The RAM Plan has been updated and revised from previous versions to address compliance with MassDEP and United States Environmental Protection Agency (USEPA) requirements for conducting this type of activity at the Site, and to address comments provided by members of the public. The City held a meeting with affected residents regarding the RAM Plan on June 22, 2010 and issued a written response to comments received from the public regarding the RAM Plan on July 6, 2010. In addition, MassDEP acknowledges that the City mailed letters to residents in the Ruggles and Greenwood Street neighborhoods on June 25, 2010 to notify them of the time period in which the City expects to conduct the RAM activities at the Acquired Residential Properties.

As described in the RAM Plan, activities to be conducted, include, but are not limited to:

- Removal of trees and shrubs as needed to facilitate site access (to the degree feasible trees and shrubs will be left in place to help maintain the privacy of the abutting properties);

This information is available in alternate format. Call Donald M. Gomes, ADA Coordinator at 617-556-1057, TDD# 866-539-7622 or 617-574-6868.

DEP on the World Wide Web: <http://www.mass.gov/dep>

Printed on Recycled Paper

- Excavation and immediate replacement of soil during the disconnection of site underground utilities and concrete foundation and footing removal;
- Demolition of dwelling structures and off-site disposal of dwelling debris (aside from the concrete foundation materials) at each of the Acquired Residential Properties;
- Removal, segregation and off-site disposal of sub-grade foam insulation material at the 118 Ruggles Street Property (or disposal of the foam and concrete where the foam cannot be readily separated from the foundation);
- Demolition and subsequent on-site management of the concrete foundations to a location at or below grade at each of the Acquired Residential Properties except the 102 Greenwood Street parcel where the entire concrete foundation is to be removed for off-site disposal;
- Breaking up of the basement slab to facilitate post-demolition drainage at each of the Acquired Residential Properties except the 102 Greenwood Street parcel;
- Demolition and off-site disposal of concrete foundation and basement slab material from the 102 Greenwood Street Property;
- Backfilling of basement space/covering of basement slab with crushed concrete foundation materials deemed suitable for on-site recycling and with documented contaminant-free fill material screened in advance for the presence of regulated contaminants (or contaminant-free fill material only in the case of 102 Greenwood Street);
- Removal of an above-ground swimming pool at one residence and other potential miscellaneous aboveground structures such as sheds (incidental soil disturbance may occur during this work, but will not entail excavation); and
- Minimal temporary soil stockpiling and stockpile management during activities that require excavation of soil (such as utility disconnection activities and incidental soil disturbance during concrete foundation and footing removal).

The RAM Plan also describes measures to be taken during RAM activities regarding ambient air and dust monitoring, dust suppression, field screening, equipment decontamination, and management, transport and/or re-use of solid waste generated from the Acquired Residential Properties.

Based on information provided in the RAM Plan, and additional information provided by the City, MassDEP is of the understanding that the City intends to commence non-invasive Site preparation activities including, but not limited to, the placement of steel plates to facilitate equipment staging on Thursday, July 15, 2010. In addition, building demolition is anticipated to commence on Monday, July 19, 2010. Site activities associated with the RAM Plan are anticipated to take approximately five weeks to complete.

MassDEP also acknowledges receipt of a copy of the City of New Bedford Department of Public Infrastructure (City DPI) *Environmental Health and Safety Plan for Remedial Activities*, dated June 2010, specific to the demolition activities, along with the list of the City DPI staff who may be present on-site during implementation of the RAM activities and copies of certificates of completion of their

required U.S. Department of Labor Occupational Safety & Health Agency (OSHA) training. MassDEP is not the regulatory agency responsible for implementing the OSHA requirements at 29 CFR 1910.120; however, this information is useful in ensuring that the RAM is conducted in accordance with all applicable local, state, federal permitting and approval requirements, as required at 310 CMR 40.0441.

Therefore, pursuant to 310 CMR 40.0443(2), MassDEP hereby provides conditional approval to the City of New Bedford to implement the RAM activities as detailed in the RAM Plan, and in accordance with the conditions described herein;

1. The City shall notify the residents in the Ruggles and Greenwood Street neighborhoods in writing stating a firm start date for conducting the RAM activities at the Acquired Residential Properties with such notification occurring after the receipt of both MassDEP and USEPA approval of the RAM activities but prior to the start of demolition activities.
2. The City, and/or its contractor, shall provide MassDEP a minimum of seventy-two (72) hours notice prior to commencing field work associated with the RAM Plan. When providing such notice, please provide the name and contact cellular phone number of the person responsible for project management and oversight at the Site;
3. All necessary precautions must be taken to minimize fugitive dust emissions and to prevent dust from impacting the surrounding neighborhood during RAM activities. Dust suppression activities must be on-going while conducting all activities described in the RAM Plan that have the potential to generate fugitive dust, including site preparation, soil excavation, demolition, concrete management, and backfilling activities.
4. As described in the RAM Plan, minimal excavation of soils is required for certain activities associated with the RAM. All soils are anticipated to be returned to the excavation. Soil requiring temporary stockpiling, if any, must be placed on a minimum of 6-mm polyethylene sheeting and must be covered, and the stockpile secured, at the end of each work day. The City must contact MassDEP prior to removing any soil from the properties should a situation arise where it is determined that it is necessary to do so.
5. This approval applies to the RAM Plan as currently submitted. The City must obtain approval from MassDEP prior to initiating any changes or modification to the activities described in the RAM Plan and approved herein.

Please be advised that, pursuant to 310 CMR 40.0445(1), a RAM Status Report must be submitted to MassDEP within one hundred and twenty (120) days from the date of MassDEP's receipt of the RAM Plan, and every six (6) months thereafter, until a RAM Completion Report, prepared in full accordance with 310 CMR 40.0446 is submitted.

All inquiries regarding this matter should be directed to Molly Cote at the letterhead address or by calling (508) 946-2792. All communication regarding this matter must reference the Release Tracking Number: 4-0015685.

Sincerely,

Leonard J. Pinaud, Chief

Re: Approval for Removal and Disposal of PCB-Contaminated Building Foundations
102 Greenwood Street and 118 Ruggles Street
Parker Street Waste Site, New Bedford, Massachusetts

Dear Mr. Alfonse:

This is in response to the Notification¹ by the City of New Bedford (the City) for removal and disposal of concrete foundations located at 102 Greenwood Street and 118 Ruggles Street, New Bedford, Massachusetts. Building structures located on the City-owned properties within the Parker Street Waste Site are being demolished on properties which have been identified as having PCB concentrations in soils at greater than or equal to (\geq) 50 parts per million (ppm). The City has conducted sampling of the building foundation walls on these properties and has identified PCB concentrations that are regulated for cleanup and disposal under § 761.61(a) on the 102 Greenwood Street and 118 Ruggles Street properties. The City has submitted a self-implementing cleanup and disposal notification (SIP) under § 761.61(a), and supported by a July 2010 Revised/Modified Release Abatement Measure Plan (the RAM Plan).

As the City has indicated during discussions of the project and within the Notification, the purpose of the demolition work is the removal of buildings located on the 6 City-acquired properties; the purpose of the work is not to address the PCB contamination in soils.

¹ Information was submitted on your behalf by TRC Environmental (TRC) to satisfy the notification requirement under CFR §761.61(a)(3), which included a SIP with the draft RAM Plan both dated September 16, 2009. A revised SIP was submitted dated June 22, 2010 in conjunction with a Revised/Modified RAM Plan dated July 6, 2010. These submissions and all referenced documents within the SIP are referred to as the "Notification."

The RAM Plan was submitted to the Massachusetts Department of Environmental Protection (MassDEP) as required by 310 CMR 40.0000, the Massachusetts Contingency Plan (the MCP). The RAM Plan details the specific activities related to site preparation and demolition activities of 6 buildings on the City-acquired properties located at 101, 102 and 111 Greenwood Street and at 98, 108 and 118 Ruggles Street in New Bedford, Massachusetts.

Site activities identified in the RAM plan include, but are not limited to, the following:

- site preparation activities such as laydown of steel plates for equipment, tree and shrub cutting, and, removal of other non-dwelling miscellaneous structures (e.g. shed, swimming pool, etc) to facilitate site access for demolition work;
- ambient air and dust monitoring and dust suppression;
- removal and replacement of soil during disconnection of underground utilities on each property;
- Demolition of upper structures and off-site disposal;
- Demolition of concrete foundations, slabs, and footings and management of said wastes with on-site re-use with the exception of 102 Greenwood Street and 118 Ruggles Street;
- Removal and off-site disposal of foam insulation debris from the foundation of the 118 Ruggles Street structure, provided it can readily be separated from the concrete foundation; otherwise, the concrete foundation with foam insulation will be removed and disposed of off-site in accordance with § 761.61(a)(5)(i)(B);
- Removal and off-site disposal of the concrete foundation located at 102 Greenwood Street as a ≥ 50 ppm PCB waste in accordance with § 761.61(a)(5)(i)(B)(2)(iii);
- Installation of a minimum 1-foot of clean fill as cover for demolished concrete foundations; and,
- Addition of clean loam and seeding of each backfilled basement area.

The above activities are more fully detailed in the RAM Plan and are also included in the Notification as they relate to 102 Greenwood Street and 118 Ruggles Street.

On June 22, 2010 the City held a public meeting to discuss the proposed demolition work and to take public comments on the draft revised/modified RAM Plan. On July 6, 2010 the City provided a written response to comments it received on this RAM Plan.

The PCB regulations provide various options for cleanup and disposal of PCB-contaminated materials by allowing the responsible party to select a cleanup and disposal approach. The SIP option under § 761.61(a) allows a site owner to remediate a site based on prescribed guidelines and cleanup levels.

EPA has reviewed the information provided in the SIP specifically relating to the 102 Greenwood Street and 118 Ruggles Street properties, including the PCB concentrations in/on the concrete foundation walls, the plan for management of the concrete following removal, and the proposed controls during the demolition work; the RAM Plan; and the City's written response to comments on the RAM Plan. In addition, EPA has reviewed and commented on earlier versions of the RAM Plan and related documents. Furthermore, EPA has participated in several public meetings to listen to community concerns related to the proposed demolition since September 2009.

Based on this information, EPA has determined that the proposed activities meet the SIP requirements under 40 CFR § 761.61(a) for management and disposal of PCB-contaminated wastes. The proposed removal and disposal of the PCB-contaminated concrete foundations and other associated wastes are consistent with the disposal requirements under § 761.61(a)(5)(i)(B). Accordingly, EPA is approving the City's Notification and the City may proceed with the demolition activities under 40 CFR § 761.61(a); the Notification; and, the RAM Plan, subject to this Approval and the conditions of Attachment 1.

With respect to the remaining 4 properties which are subject to the demolition activities, including 101 Greenwood Street, 111 Greenwood Street, 98 Ruggles Street, and 108 Ruggles Street, the City will be addressing these properties under the MCP as the PCB concentrations on these foundation walls were less than (<) 1 ppm.

As indicated in the Notification, the City is in the planning stage for implementation of a full remedy for the Parker Street Waste Site. As PCB-contaminated soils with ≥ 50 ppm remain on properties located at 101 Greenwood Street, 102 Greenwood Street, and 118 Ruggles Street, cleanup and disposal of PCB-contaminated soils on these properties are regulated under 40 CFR § 761.61. As such, the City will be required to submit a cleanup plan to EPA to address the contamination on these properties.

Should you have any questions on this matter, please contact Kimberly Tisa at (617) 918-1527.

Sincerely,

Mary Sanderson, Chief
Remediation & Restoration II Branch

**PCB APPROVAL CONDITIONS
102 GREENWOOD STREET AND 118 RUGGLES STREET
PARKER STREET WASTE SITE
NEW BEDFORD, MASSACHUSETTS**

GENERAL CONDITIONS

1. This Approval is granted under the authority of Section 6(e) of the Toxic Substances Control Act (TSCA), 15 U.S.C. § 2605(e), and the PCB regulations at 40 CFR Part 761, and applies solely to the properties located at 102 Greenwood Street and 118 Ruggles Street (together, "the Sites") as identified in the Notification.
 - a. This Approval does not address excavation and off-site disposal of soils with greater than or equal to (\geq) 50 parts per million (ppm) from the Sites. In the event that the City determines that PCB-contaminated soils at \geq 50 ppm require excavation and off-site disposal, the City shall contact EPA for a determination on the requirements for disposal of the soils.
2. The City of New Bedford (the City) shall conduct on-site activities in accordance with the conditions of this Approval and with the Notification.
3. In the event that the activities described in the Notification differ from the conditions specified in this Approval, the conditions of this Approval shall govern.
4. The terms and abbreviations used herein shall have the meanings as defined in 40 CFR § 761.3 unless otherwise defined within this Approval.
5. The City must comply with all applicable federal, state and local regulations, including the storage, handling, and disposal of all PCB wastes, PCB Items and decontamination wastes generated under this Approval. In the event of a new spill during the demolition activities, the City shall contact EPA within 24 hours for direction on PCB cleanup and sampling requirements.
6. The City is responsible for the actions of all officers, employees, agents, contractors, subcontractors, and others who are involved in activities conducted under this Approval. If at any time the City has or receives information indicating that it or any other person has failed, or may have failed, to comply with any provision of this Approval, the City must report the information to EPA in writing within 24 hours of having or receiving the information.

7. This Approval does not constitute a determination by EPA that the selected transporters or disposal facilities are authorized to conduct the activities set forth in the Notification. The City is responsible for ensuring that the selected transporters and disposal facilities are authorized to conduct these activities in accordance with all applicable federal, state and local statutes and regulations.
8. This Approval does not: 1) waive or compromise EPA's enforcement and regulatory authority; 2) release the City from compliance with any applicable requirements of federal, state or local law; or 3) release the City from liability for, or otherwise resolve, any violations of federal, state or local law.

REMOVAL AND DISPOSAL CONDITIONS

9. The City shall notify EPA at least 24 hours prior to commencing field work associated with the activities authorized under this Approval. The City also shall provide the name and contact information for City personnel that will be responsible for the activities to be conducted under this Approval.
10. All necessary precautions should be taken to minimize fugitive dust emissions and to prevent dust from impacting the surrounding neighborhood during RAM activities and activities authorized under this Approval. Dust suppression activities shall be on-going while conducting all activities described in the RAM Plan and authorized under this Approval that have the potential to generate fugitive dust, including site preparation, soil excavation, demolition, concrete management, and backfilling activities.
11. As described in the Notification and the RAM Plan, minimal excavation of soils is required for certain activities, such as utility work. All soils are anticipated to be returned to the excavation. Soil requiring temporary stockpiling, if any, will be placed on a minimum of 6-mm polyethylene sheeting and will be covered, and the stockpile secured, at the end of each work day.
12. Following removal of PCB-contaminated *porous surfaces*, (e.g. concrete foundations, subgrade foam insulation), these *porous surfaces* shall be disposed of as described in the Notification.
13. All PCB waste (regardless of concentration) generated as a result of the activities described in the Notification, excluding any decontaminated materials, shall be marked in accordance with § 761.40; stored in a manner prescribed in § 761.65; and, disposed of in accordance with 40 CFR § 761.61(a)(5), unless otherwise specified below or in this Approval:
 - a. Decontamination wastes and residues shall be disposed of in accordance with 40 CFR § 761.79(g)(6).

- b. Moveable equipment, tools, and sampling equipment shall be decontaminated in accordance with either 40 CFR § 761.79(b)(3)(i)(A), § 761.79(b)(3)(ii)(A), or § 761.79(c)(2).
- c. PCB-contaminated water generated during decontamination shall be decontaminated in accordance with 40 CFR § 761.79(b)(1) or disposed of under § 761.60.

INSPECTION, MODIFICATION AND REVOCATION CONDITIONS

- 14. The City shall allow any authorized representative of the Administrator of the EPA to inspect the Site and to inspect records and take samples as may be necessary to determine compliance with the PCB regulations and this Approval. Any refusal to allow such an inspection (as authorized by Section 11 of TSCA) shall be grounds for revocation of this Approval.
- 15. Any proposed modification(s) in the plan, specifications, or information in the Notification must be submitted to EPA no less than 14 calendar days prior to the proposed implementation of the change. Such proposed modifications will be subject to the procedures of 40 CFR §761.61(a)(3)(ii).
- 16. Any departure from the conditions of this Approval without prior, written authorization from the EPA may result in the revocation, suspension and/or modification of the Approval, in addition to any other legal or equitable relief or remedy the EPA may choose to pursue.
- 17. Any misrepresentation or omission of any material fact in the Notification or in any records or reports may result in the EPA's revocation, suspension and/or modification of the Approval, in addition to any other legal or equitable relief or remedy the EPA may choose to pursue.

RECORDKEEPING AND REPORTING CONDITIONS

- 18. The City shall prepare and maintain all records and documents required by 40 CFR Part 761, including but not limited to the records required under Subparts J and K. A written record of the activities and the analytical sampling shall be established and maintained by the City in one centralized location until such time as EPA approves in writing a request for an alternative disposition of such records. All records shall be made available for inspection by authorized representatives of EPA.

19. The City shall submit a final report to EPA within 60 days of completion of the activities authorized under this Approval. At a minimum, this final report shall include: a short narrative of the remedial activities; characterization and confirmation sampling analytical results (if applicable); copies of the accompanying analytical chains of custody; field and laboratory quality control/quality assurance checks; copies of manifests and/or bills of lading, if applicable; and copies of certificates of disposal or similar certifications issued by the disposer, if applicable.

20. Required submittals, including notifications and certifications, shall be mailed to:

Kimberly N. Tisa, PCB Coordinator
United States Environmental Protection Agency
5 Post Office Square, Suite 100 (OSRR07-2)
Boston, Massachusetts 02109-3912
Telephone: (617) 918-1527
Facsimile: (617) 918-0527

21. No record, report or communication required under this Approval shall qualify as a self-audit or voluntary disclosure under EPA audit, self disclosure or penalty policies.

Serial Number: 85201838
Test ID: 2
Test Abbreviation: NP_128 GW
Start Date: 7/24/2010
Start Time: 7:10:06
Duration (dd:hh:mm:ss): 0:07:37:00
Time constant (seconds): 5
Log Interval (mm:ss): 1:00
Number of points: 457
Notes: Positioned adjacent to 128 Ruggles.

Statistics

Channel: Aerosol
Units: mg/m³
Average: 0.005
Minimum: 0.002
Time of Minimum: 14:06:06
Date of Minimum: 7/24/2010
Maximum: 0.012
Time of Maximum: 7:24:06
Date of Maximum: 7/24/2010

Calibration

Sensor: Aerosol

 REF: Ruggles/Greenwood foundation material

Dear Ms. Henlin:

Acceptance of the Ruggles/Greenwood foundation material delivered by the City of New Bedford on July 26, 2010 and July 27, 2010 was based on the material not being of any hazardous origin. This correspondence is our confirmation that the material received was disposed of as solid waste.

Should you have any questions or require additional information, please do not hesitate to contact me at 508-998-5874.

Best regards,

Hank Van Laarhoven
 Director of Operations

Memorandum

To: Molly Cote, Massachusetts Department of Environmental Protection
From: David M. Sullivan, LSP, CHMM, TRC Environmental Corporation
Subject: Residential Demolition Concrete Foundation Removal
101 and 111 Greenwood Street and 98 and 108 Ruggles Street
New Bedford, Massachusetts
Date: July 26, 2010
CC: Kimberly Tisa, United States Department of Environmental Protection
Ronald Labelle, Commissioner of Department of Public Infrastructure, City of New Bedford
Scott Alfonse, Director of Environmental Stewardship, City of New Bedford
Cheryl Henlin, Department of Environmental Stewardship, City of New Bedford

Introduction

Per the direction of Molly Cote of the Massachusetts Department of Environmental Protection (MassDEP), TRC Environmental Corporation (TRC) has prepared this memorandum to summarize a change to the approach to the demolition of residential structures described in the Revised Modified Release Abatement Measure (RAM) Plan submitted to MassDEP on July 6, 2010 for Release Tracking Number (RTN) 4-15685, regarding building demolition within a portion of the Parker Street Waste Site (PSWS).

Rather than on-site reuse of the crushed concrete from foundation walls from the 101 and 111 Greenwood Street and 98 and 108 Ruggles Street properties, this material will be removed from the site for offsite landfill disposal. The remaining concrete basement slab material will be demolished and managed onsite as described in Section 4.2.3.1 of the Revised Modified RAM Plan.

The following presents a summary of a teleconference between TRC, MassDEP, the United States Environmental Protection Agency (EPA), and the City of New Bedford (City) regarding the modification of the plan for offsite disposal of select concrete material.

Concrete Foundation Management

As described in the MassDEP approved RAM Plan for demolition of the six Acquired Residential Properties, with the exception of the 102 Greenwood Street and 118 Ruggles Street properties (concrete foundation and foam insulation material was managed as PCB Remediation Waste in accordance with EPA approval), the City planned to demolish the concrete foundation walls and basement slab to a location at or below grade pursuant to the MassDEP Site Assignment Regulations

for Solid Waste Facilities (310 CMR 16.00), specifically the asphalt pavement, brick and concrete recycling operations detailed in 310 CMR 16.05(3)(e). However, during implementation of RAM-related activities by the City of New Bedford's Department of Public Infrastructure (DPI), it was determined that the on-site reuse of the crushed concrete foundation walls at the 101 and 111 Greenwood Street and 98 and 108 Ruggles Street properties would result in mounding throughout the Site following grading of the properties with documented uncontaminated imported backfill and/or loam. Removal of the concrete would eliminate the mounding issue and provided a more attractive and more easily maintained result for the properties before the implementation of reuse and remediation activities.

As a result, Ronald Labelle (Commissioner of the City of New Bedford's DPI), requested approval to dispose of the concrete foundation walls from the 101 and 111 Greenwood Street and 98 and 108 Ruggles Street properties at a permitted offsite facility. MassDEP (Molly Cote) verbally approved demolition and offsite disposal of the concrete foundation walls on July 26, 2010. The concrete foundation walls have previously undergone laboratory testing for polychlorinated biphenyls (PCBs) and this material does not require management as PCB Remediation Waste in accordance with the July 13, 2010 approval letter from the EPA to the City (i.e., total PCB concentrations in concrete did not exceed 1 milligram per kilogram). The concrete basement slabs at each of the four above-referenced properties will be managed onsite as described in the approved RAM Plan (i.e., demolished onsite to a size no greater than 6-inches in diameter in accordance with 310 CMR 16.00).

The City of New Bedford's DPI is planning to load the material into trucks for offsite disposal at the Crapo Hill Landfill in Dartmouth, Massachusetts. The facility has given preliminary acceptance to receive the material. TRC will work with the City to provide any needed documentation to facilitate disposal of the material consistent with the facilities specifications, and state and Federal regulations and policies. Shipping of the material will begin as early as July 26, 2010.

Please call or write if you have any questions or comments.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

REVISED REPORT - 07/01/2010 - Full 8270 compound list added to blank, LCS and LCS Duplicate.

For method 6010, only RCRA 8 metals were requested and reported.

SW-846 8260B

Qualifications:

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

Bromoform, Chlorodibromomethane

B014901-BS1, B014901-BSD1

Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.

Analyte & Samples(s) Qualified:

Acetone, Bromomethane

B014901-BS1

Continuing calibration did not meet method specifications and was biased on the high side for this compound. Significant uncertainty is associated with the reported value which is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

1,2-Dibromo-3-chloropropane (DBCP), Bromoform, Chlorodibromomethane

B014901-BS1, B014901-BSD1

Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy are associated with reported result.

Analyte & Samples(s) Qualified:

1,4-Dioxane, 2-Butanone (MEK), Acetone, Tetrahydrofuran

10F0335-01[Med-Soil-1], B014901-BLK1, B014901-BS1, B014901-BSD1

SW-846 8270C

Qualifications:

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

2,4-Dinitrophenol

B014882-BLK1, B014882-BS1, B014882-BSD1

Initial calibration did not meet method specifications. Compound was calibrated using linear regression with correlation coefficient <0.99.

Analyte & Samples(s) Qualified:

2,4-Dinitrophenol

10F0335-01[Med-Soil-1], B014882-BLK1, B014882-BS1, B014882-BSD1

MADEP-EPH-04-1.1

SPE cartridge contamination with non-petroleum compounds, if present, is verified by GC/MS in each method blank per extraction batch and excluded from C11-C22 aromatic range fraction in all samples in the batch. No significant modifications were made to the method.

MADEP-VPH-04-1.1

No significant modifications were made to the method. All VPH samples were received preserved properly in methanol with a soil/methanol ratio of 1:1 +/- 25% completely covered by methanol in the proper containers specified on the chain-of-custody form unless specified in this narrative.

SW-846 8260B

Laboratory control sample recoveries for required MCP Data Enhancement 8260 compounds were all within limits specified by the method except for "difficult analytes" where recovery control limits somewhere between 40-160% are used and/or unless otherwise listed in this narrative. Difficult analytes: MIBK, MEK, tert-butyl alcohol, acetone, 1,4-dioxane, vinyl chloride, chloromethane, dichlorodifluoromethane, 2-hexanone, naphthalene, methylene chloride, and tert-butylbenzene, bromomethane.

Duplicate laboratory fortified blank RPDs were all within control limits specified by the method except for "difficult analytes" where RPDs of 50% are used and/or unless otherwise listed in this narrative. Difficult analyte: 1,4-dioxane

SW-846 8270C

Laboratory control sample recoveries for required MCP Data Enhancement 8270 compounds were all within control limits specified by the method, 40-140% for base/neutral and 30-130% for acids except for "difficult analytes" listed below and/or otherwise listed in this narrative. Difficult analytes for soil LCS - limits between 10 and 180% depending on the compound(see QC summary report for limits): 3,3'-dichlorobenzidine, aniline, 2,4-dinitrophenol, and 4-chloroaniline.

Duplicate laboratory fortified blank RPDs were all less than or equal to 20% for water or 30% for soil except for "difficult analytes" where RPDs of 50% are used and/or otherwise listed below or elsewhere in this narrative. Difficult analytes for soil RPDs: 3,3'-dichlorobenzidine, 4-nitrophenol, and aniline.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

- * QC result is outside of established limits.
 - † Wide recovery limits established for difficult compound.
 - ‡ Wide RPD limits established for difficult compound.
 - # Data exceeded client recommended or regulatory level
- Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
- L-04 Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
 - L-07 Either laboratory fortified blank/laboratory control sample or duplicate recovery is outside of control limits, but the other is within limits. RPD between the two LFB/LCS results is within method specified criteria.
 - R-05 Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
 - V-06 Continuing calibration did not meet method specifications and was biased on the high side for this compound. Significant uncertainty is associated with the reported value which is likely to be biased on the high side.
 - V-16 Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy are associated with reported result.
 - V-19 Initial calibration did not meet method specifications. Compound was calibrated using linear regression with correlation coefficient <0.99.

An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status

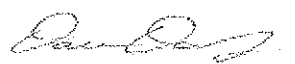

A	Were all samples received by the laboratory in a condition consistent with that described on the Chain-of-Custody documentation for the data set?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
B	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guidelines?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
C	Does the data included in this report meet all the analytical requirements for "Presumptive Certainty", as described in Section 2.0 (a), (b), (c) and (d) of the MADEP document CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
D	VPH and EPH Methods only: Was the VPH or EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹

A response to questions E and F below is required for "Presumptive Certainty" status

E	Were all analytical QC performance standards and recommendations for the specified methods achieved?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No ¹
F	Were results for all analyte-list compounds/elements for the specified method(s) reported?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No ¹

¹All Negative responses must be addressed in an attached Environmental Laboratory case narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

MADEP MCP Response Action Analytical Report Certification

This form provides certifications for all samples performed by MCP methods. Please refer to the Sample Results and Container Information sections of this report for specification of MCP methods used for each analysis. The following questions pertain only to MCP Analytical Methods.

An affirmative response to questions A through F is required for "Presumptive Certainty" status

A	Were all samples received in a condition consistent with those described on the Chain-of-Custody, properly preserved (including temperature) in the field or laboratory, and prepared/analyzed within method holding times?	YES
B	Were the analytical method(s) and all associated QC requirements specified in the selected CAM protocol(s) followed?	YES
C	Were all required corrective actions and analytical response actions specified in the selected CAM protocol(s) implemented for all identified performance standard non-conformances?	YES
D	Does the laboratory report comply with all the reporting requirements specified in CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data?"	YES
E a	VPH, EPH, and APH Methods only: Was each method conducted without significant modification(s)? (Refer to the individual method(s) for a list of significant modifications).	N/A
E b	APH and TO-15 Methods only: Was the complete analyte list reported for each method?	N/A
F	Were all applicable CAM protocol QC and performance standard non-conformances identified and evaluated in a laboratory narrative (including all "No" responses to Questions A through E)?	YES

A response to questions G, H and I is required for "Presumptive Certainty" status

G	Were the reporting limits at or below all CAM reporting limits specified in the selected CAM protocol(s)?	YES
H	Were all QC performance standards specified in the CAM protocol(s) achieved?	NO
I	Were results reported for the complete analyte list specified in the selected CAM protocol(s)?	YES

For any questions answered "No", please refer to the case narrative section on the following page(s).

Case Narrative

The samples were received in accordance with the Chain of Custody and no significant deviations were encountered during the preparation or analysis unless otherwise noted. Sample Receipt, Container Information, and the Chain of Custody are located at the back of the report.

Results contained within this report relate only to the samples submitted under this Alpha Lab Number and meet all of the requirements of NELAC, for all NELAC accredited parameters. The data presented in this report is organized by parameter (i.e. VOC, SVOC, etc.). Sample specific Quality Control data (i.e. Surrogate Spike Recovery) is reported at the end of the target analyte list for each individual sample, followed by the Laboratory Batch Quality Control at the end of each parameter. If a sample was re-analyzed or re-extracted due to a required quality control corrective action and if both sets of data are reported, the Laboratory ID of the re-analysis or re-extraction is designated with an "R" or "RE", respectively. When multiple Batch Quality Control elements are reported (e.g. more than one LCS), the associated samples for each element are noted in the grey shaded header line of each data table. Any Laboratory Batch, Sample Specific % recovery or RPD value that is outside the listed Acceptance Criteria is bolded in the report. Definitions of all data qualifiers and acronyms used in this report are provided in the Glossary located at the back of the report.

Please see the associated ADEx data file for a comparison of laboratory reporting limits that were achieved with the regulatory Numerical Standards requested on the Chain of Custody.

In reference to question H:

The WG418757-2/3 LCS/LCSD recoveries, associated with L1008855-01, are below the acceptance criteria for Dinoseb (0%/8%); however, the recoveries are due to a noted method interference caused by the hydrolysis step of the extraction procedure. The results of the associated sample are reported; however, all results are considered to have a potentially low bias for this compound.

I, the undersigned, attest under the pains and penalties of perjury that, to the best of my knowledge and belief and based upon my personal inquiry of those responsible for providing the information contained in this analytical report, such information is accurate and complete. This certificate of analysis is not complete unless this page accompanies any and all pages of this report.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

MADEP-VPH-04-1.1

Qualifications:

Soil/methanol ratio does not meet method specifications. Excess amount of soil. Sample was completely covered with methanol, but with less than the method-specified amount.

Analyte & Samples(s) Qualified:

10E0057-01[LOAM-IP]

SW-846 8260B

Qualifications:

Surrogate recovery is outside of control limits. Data validation is not affected since all results are less than the reporting limit and bias is on the high side.

Analyte & Samples(s) Qualified:

4-Bromofluorobenzene

10E0057-01[LOAM-IP]

Continuing calibration did not meet method specifications and was biased on the high side for this compound. Significant uncertainty is associated with the reported value which is likely to be biased on the high side.

Analyte & Samples(s) Qualified:

Bromoform, Bromomethane

B013301-BS1, B013301-BSD1

Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy are associated with reported result.

Analyte & Samples(s) Qualified:

1,4-Dioxane, 2-Butanone (MEK), Acetone, Tetrahydrofuran

10E0057-01[LOAM-IP], B013301-BLK1, B013301-BS1, B013301-BSD1

SW-846 8270C

Qualifications:

Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.

Analyte & Samples(s) Qualified:

2,4-Dinitrophenol

10E0057-02[LOAM-IP], B013279-BLK1, B013279-BS1, B013279-BSD1

Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.

Analyte & Samples(s) Qualified:

4-Chloroaniline

10E0057-02[LOAM-IP], B013279-BLK1, B013279-BS1, B013279-BSD1

One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.

Analyte & Samples(s) Qualified:

Terphenyl-d14

B013279-BLK1

Initial calibration did not meet method specifications. Compound was calibrated using linear regression with correlation coefficient <0.99 .

Analyte & Sample(s) Qualified:

2,4-Dinitrophenol, 4-Nitrophenol

10E0057-02[LOAM-IP], B013279-BLK1, B013279-BS1, B013279-BSD1

MADEP-EPH-04-1.1

SPE cartridge contamination with non-petroleum compounds, if present, is verified by GC/MS in each method blank per extraction batch and excluded from C11-C22 aromatic range fraction in all samples in the batch. No significant modifications were made to the method.

MADEP-VPH-04-1.1

No significant modifications were made to the method. All VPH samples were received preserved properly in methanol with a soil/methanol ratio of 1:1 +/- 25% completely covered by methanol in the proper containers specified on the chain-of-custody form unless specified in this narrative.

SW-846 8260B

Laboratory control sample recoveries for required MCP Data Enhancement 8260 compounds were all within limits specified by the method except for "difficult analytes" where recovery control limits somewhere between 40-160% are used and/or unless otherwise listed in this narrative. Difficult analytes: MIBK, MEK, tert-butyl alcohol, acetone, 1,4-dioxane, vinyl chloride, chloromethane, dichlorodifluoromethane, 2-hexanone, naphthalene, methylene chloride, and tert-butylbenzene.

Duplicate laboratory fortified blank RPDs were all within control limits specified by the method except for "difficult analytes" where RPDs of 50% are used and/or unless otherwise listed in this narrative. Difficult analyte: 1,4-dioxane

SW-846 8270C

Laboratory control sample recoveries for required MCP Data Enhancement 8270 compounds were all within control limits specified by the method, 40-140% for base/neutral and 30-130% for acids except for "difficult analytes" listed below and/or otherwise listed in this narrative. Difficult analytes for soil LCS - limits between 10 and 180% depending on the compound(see QC summary report for limits): 3,3'-dichlorobenzidine, aniline, 2,4-dinitrophenol, and 4-chloroaniline.

Duplicate laboratory fortified blank RPDs were all less than or equal to 20% for water or 30% for soil except for "difficult analytes" where RPDs of 50% are used and/or otherwise listed below or elsewhere in this narrative. Difficult analytes for soil RPDs: 3,3'-dichlorobenzidine, 4-nitrophenol, and aniline.

The results of analyses reported only relate to samples submitted to the Con-Test Analytical Laboratory for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

*	QC result is outside of established limits.
†	Wide recovery limits established for difficult compound.
‡	Wide RPD limits established for difficult compound.
#	Data exceeded client recommended or regulatory level
	Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
L-04	Laboratory fortified blank/laboratory control sample recovery and duplicate recovery are outside of control limits. Reported value for this compound is likely to be biased on the low side.
O-01	Soil/methanol ratio does not meet method specifications. Excess amount of soil. Sample was completely covered with methanol, but with less than the method-specified amount.
R-05	Laboratory fortified blank duplicate RPD is outside of control limits. Reduced precision is anticipated for any reported value for this compound.
S-07	One associated surrogate standard recovery is outside of control limits but the other(s) is/are within limits. All recoveries are > 10%.
S-17	Surrogate recovery is outside of control limits. Data validation is not affected since all results are less than the reporting limit and bias is on the high side.
V-06	Confirming calibration did not meet method specifications and was biased on the high side for this compound. Significant uncertainty is associated with the reported value which is likely to be biased on the high side.
V-16	Response factor is less than method specified minimum acceptable value. Reduced precision and accuracy are associated with reported result.
V-19	Initial calibration did not meet method specifications. Compound was calibrated using linear regression with correlation coefficient <0.99.

An affirmative response to questions A, B, C and D is required for "Presumptive Certainty" status

A	Were all samples received by the laboratory in a condition consistent with that described on the Chain-of-Custody documentation for the data set?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
B	Were all QA/QC procedures required for the specified analytical method(s) included in this report followed, including the requirement to note and discuss in a narrative QC data that did not meet appropriate performance standards or guidelines?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
C	Does the data included in this report meet all the analytical requirements for "Presumptive Certainty", as described in Section 2.0 (a), (b), (c) and (d) of the MADEP document CAM VII A, "Quality Assurance and Quality Control Guidelines for the Acquisition and Reporting of Analytical Data"?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
D	VPH and EPH Methods only: Was the VPH or EPH Method conducted without significant modifications (see Section 11.3 of respective Methods)	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹

A response to questions E and F below is required for "Presumptive Certainty" status

E	Were all analytical QC performance standards and recommendations for the specified methods achieved?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹
F	Were results for all analyte-list compounds/elements for the specified method(s) reported?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No ¹

¹ All Negative responses must be addressed in an attached Environmental Laboratory case narrative.

I, the undersigned, attest under the pains and penalties of perjury that, based upon my personal inquiry of those responsible for obtaining the information, the material contained in this analytical report is, to the best of my knowledge and belief, accurate and complete.
