## PROJECT NARRATIVE

### Project Description

The applicant is seeking an amended order of conditions for SE049-0819 that was issued on March 12, 2020. The applicant proposed a change to the house and slight change to the driveway location due to requests made by the new lot owner. The house has been moved further northwest on the lot and away from the 100' wetland buffer. The driveway is located on the original location but is a bit smaller. The house footprint of the revised plan is also considerably smaller which will generate a lot less runoff.

The proposed locations are the same and the erosion control limits have stayed the same from the original plan. thank you for your consideration in issuing an amended order of conditions for this project.
